1 THE COURT: This is United States v. State of
2 Mississippi, Civil Action Number 3:16CV622CWR-FKB. Good
3 morning. Is there anything we need to take up before we --
4 before the United States calls its next witness?

5 MR. SCHUTZER: Not from the United States.

6 MR. SHELSON: We would just say, Your Honor -- Your
7 Honor, the witness today is a psychiatrist. The State does not
8 dispute she's an expert in the field of psychiatry. If this
9 speeds up any part of this process, then so be it.

10 THE COURT: Okay. All right. Well, great. Thank
11 you, Mr. Shelson. The government may call the witness.

12 MR. SCHUTZER: Thank you, Your Honor. We call
13 Dr. Carol VanderZwaag.

14 THE COURT: All right.

15 MR. SCHUTZER: Let me again thank the court for
16 flexibility in scheduling today so that we can kind of get this
17 done in one day.

18 THE COURT: All right. No problem.

19 (Witness Sworn)

20 THE COURT: Ms. VanderZwaag, before you are at the
21 microphone, please speak loudly and clearly for everybody to
22 hear you. The court reporter needs you to speak at a pace at
23 which she can keep up with you. Allow the lawyers to finish
24 their questions before you speak so that the two of you will
25 not be speaking at the same time.

1 Please make sure all of your responses are verbal. If
2 you're going to nod or shake your head, say yes or no too, and
3 try to avoid using uh-huh and unh-unh. They're kind of spelled
4 the same sometimes but have two different meanings. And I
5 think you're from North Carolina, right?

6 THE WITNESS: Yes, sir.

7 THE COURT: All right. So we won't have any problem
8 with you. It's these other people. But if you will, please
9 state and spell your name for the record.

10 THE WITNESS: Yes. Right now?

11 THE COURT: Yes, ma'am.

12 THE WITNESS: My name is Carol VanderZwaag. It's
13 C-A-R-O-L. Last name is V-A-N-D-E-R-Z-W-A-A-G.

14 THE COURT: Thank you. You can bring that microphone
15 just a little bit closer to you if you can. You may proceed.

16 MR. SCHUTZER: Thank you, Your Honor.

17 DR. CAROL VANDERZWAAG,
18 having first been duly sworn, testified as follows:

19 DIRECT EXAMINATION

20 BY MR. SCHUTZER:

21 Q Dr. VanderZwaag, were you retained as an expert in this
22 case?

23 A Yes.

24 Q What were you asked to do?

25 A I was asked to meet with and interview and review the

1 community mental health records and -- and yes, Mississippi
2 State Hospital records of individuals who had been hospitalized
3 in one of the state hospitals between 2015 and 2017.

4 Q Did you write a report setting out what you did and what
5 you found?

6 A Yes, I did.

7 Q Is that report PX-402 in the binder you have in front of
8 you?

9 A Yes.

10 Q Does that report accurately reflect your opinions and the
11 basis for them?

12 A Yes.

13 Q Let's talk about that report and your opinions in some
14 detail. I want to spend a few minutes introducing you to the
15 court. We'll cover this briefly.

16 Could you describe your professional history since
17 finishing your medical education?

18 A Yes. I finished my medical education in 1991, and I -- my
19 first job was at John Umstead Hospital in Butner, North
20 Carolina. It's a state hospital. And I spent eight years
21 there, first as a staff psychiatrist, and then as the medical
22 director of the rehabilitation unit. And that was the
23 intermediate to longer-term unit of that hospital at the time.

24 I then took a position with a community mental health
25 center in North Carolina as well, and at the time that I took

1 that position, they were developing an ACT team, so I went to
2 work as the ACT psychiatrist, and I spent the next 18 years
3 working as an ACT psychiatrist with that team.

4 The team stayed together in terms of the individuals we
5 were serving and the staff, but we went through a number of
6 different organizations that we worked for over time. So the
7 last seven years of that 18 years, I was clinical professor of
8 psychiatry at UNC. UNC picked up that ACT team. And there I
9 worked in the Center for Excellence for Community Mental
10 Health, which is part of the outpatient services of the
11 department of psychiatry. And I was involved just not only
12 with ACT services but a number of other community services that
13 were offered there.

14 And then last summer, I took a position back at a state
15 hospital, a different state hospital called Central Regional
16 Hospital, where I'm now the deputy chief medical officer.

17 Q In your roles at state hospitals and as an ACT team
18 psychiatrist, did you have responsibility for assessing
19 individuals for community-based mental health services?

20 A Yes.

21 Q Have you provided any training to other ACT teams?

22 A Yes, I have.

23 Q Could you describe that training?

24 A Yes. So, again, going the last seven years when I was
25 working at UNC, there was an Institute for Best Practices

1 within that Center for Excellence, and I worked with them to --
2 they ran a three-day -- we called ACT 101 training program that
3 every ACT provider in the state needed to attend, and I was
4 part of that training program. So I taught the part about the
5 psychiatric services and the nursing services within the ACT
6 team as part of that training.

7 We also did that training. At least once I remember doing
8 that in Virginia as well for Virginia ACT teams. And then,
9 also, my team was established as a high fidelity team, so we
10 were able to have other teams who were working on improving
11 their practice come and shadow us, so typically that would
12 involve working one-on-one for several days with individuals
13 from other teams and just work -- helping them work through the
14 practice of ACT. So we did that with a number of teams in
15 North Carolina and also a number of teams in Virginia.

16 Q Are you familiar with something called ACT stepdown?

17 A Yes.

18 Q What is that?

19 A So that's a relatively recent Medicaid service definition
20 in North Carolina that I had some role in helping design what
21 that might look like. It's a transitional service off of ACT
22 teams that allows people who've made improvements but still
23 need to stay connected to the ACT providers because of the
24 relationship that they have and also still need services to go
25 to them, but with less intensity and less frequency. So it's a

1 portion of the work that an ACT team can do. Some of them --
2 some of the individuals can be receiving stepdown services and
3 some ACT services.

4 MR. SCHUTZER: Your Honor, we offer Dr. VanderZwaag as
5 an expert in psychiatry and community-based mental health
6 services assessments.

7 MR. SHELSON: No objection, Your Honor.

8 THE COURT: All right. Dr. VanderZwaag will be
9 permitted to testify in the designated areas, psychiatrist --
10 psychiatry and community health services. I'm looking at what
11 you have there. Okay. That's not what -- they're cleaning it
12 up. Tell me, again, Mr. Schutzer, what is her area.

13 MR. SCHUTZER: Psychiatry and community-based mental
14 health services assessments.

15 THE COURT: Okay. She will be so designated. Thank
16 you.

17 MR. SCHUTZER: Thank you, Your Honor.

18 BY MR. SCHUTZER:

19 Q Dr. VanderZwaag, before we talk in detail about the work
20 that you did in Mississippi, I want to ask some preliminary
21 questions about hospitals and mental illness. Generally
22 speaking, is there a difference between hospitalization in the
23 psychiatric unit of a general hospital and hospitalization in a
24 state hospital?

25 A Yes.

1 Q Could you describe what the difference is?

2 A The -- so the main difference is that general hospital
3 psychiatric units, there tend to be more of them. They tend to
4 be more widely disbursed in communities. So the main benefit
5 is to keep individuals as close to home as possible when they
6 need a hospital stay. That allows for not only their family
7 and other natural supports to interface with the treatment team
8 and the individual while they're hospitalized but also their
9 outpatient provider.

10 So one of the things I was able to do routinely was to go
11 visit with individuals who were hospitalized that I had been
12 working with, and I could work with the inpatient teams. And
13 that kind of coordination of care and developing a coordinated
14 treatment plan allows for shorter lengths of stay, because by
15 staying engaged with the individual, the outpatient provider
16 will know, you know, at which point they reach that they're
17 safe to come out and that they can continue working with them.

18 So that proximity to home, connection to the people who
19 know the person best, is a major benefit.

20 Q In your answer just there, you referred to being able to
21 routinely go visit with individuals who are hospitalized that
22 you had been working with.

23 A Yes.

24 Q Is that referring to the time when you were working on an
25 ACT team?

1 A Yes.

2 Q Is it preferable for people to have a shorter length of
3 stay in a hospital?

4 A Yes.

5 Q Why is that?

6 A Because the hospital is really just to help them regain
7 stability, but the work of recovery and moving forward in their
8 lives happens in the community. So it's not -- it's not been
9 shown that one can do the significant work of recovery
10 that's -- that people are seeking in a hospital because they
11 are removed from their community where they need to learn and
12 adapt, and the skills don't transfer from one environment to
13 another.

14 Q You used the word "recovery" a couple of times in your
15 answer.

16 A Yes.

17 Q Will you define what you mean by recovery?

18 A So recovery is a process of change that is essentially
19 about individuals regaining a connection to their full life.
20 It's about developing a meaningful life for that individual.
21 It's about having hope and being resilient. It's about
22 developing the connections to other people and community.

23 Q I want to talk about somebody who you met who's been in the
24 state hospital for a while, person 38. In your binder, you
25 have a tab labeled PX-400. That's a list of all the people in

1 the client review, as well as an anonymous number we've
2 assigned them to protect their confidentiality. Please refer
3 to this any time you need to check who I'm talking about.

4 A Yes.

5 Q So let's turn in your report, please, which is PX-402, the
6 first tab in your binder, to page 43 of that document. Using
7 the numbers in the bottom right of the page.

8 A Yes.

9 Q Can you tell the court a little bit about person 38?

10 A Yes, I interviewed person 38 at Mississippi State Hospital
11 in February of 2018. At that time, he was a 43-year-old male
12 who had been residing at the state hospital since 2006. And he
13 had had a difficult stay at the hospital, and he was not in
14 very good condition at the time that I met him, and it was
15 difficult for him to maintain alertness and actually have an
16 interview, although he was able to state a few of his
17 interests, like going to church, lifting weights, and he was a
18 big lover of music.

19 Q In your report at page 45, in the section called "Community
20 Services and Summary Assessment," you write that he may have
21 experienced institutional dependence. That's at the end of the
22 first paragraph. Do you see that?

23 A Yes.

24 Q What is institutional dependence?

25 A So it's a situation where if you've been confined to an

1 institution for a long period of time, you start to rely very
2 much on the structure, routine and assistance that you get
3 within that institution so that there can be a loss of
4 independence, a loss of skills. And it's problematic when
5 people do leave an institution because sometimes they can feel
6 like they don't have that internal structure anymore to -- or
7 so it can lead to just a decrease in functioning.

8 Q Generally, are there harms that occur when somebody stays
9 in a state hospital for an extended period of time?

10 A That is one of the harms, yes, that people can lose
11 their -- they lose motivation, they lose hope, they lose
12 skills.

13 Q What led you to conclude that person 38 may have
14 experienced institutional dependence?

15 A Well, there was some evidence in his Mississippi State
16 Hospital record that, based on some assessments, there had been
17 a decline in his independent functioning.

18 Q Would you turn in the binder, please, to the tab marked
19 PX-1083, after the very big tab.

20 A Yes.

21 Q This is a document we've marked as PX-1083. What is this
22 document?

23 A This is a psychological evaluation update by a Ph.D.
24 psychologist.

25 Q When was the evaluation update completed?

1 A Well, it was completed in 2011, although looking at this,
2 someone had written 1911, but I think that was an error.

3 MR. SCHUTZER: Your Honor, I move PX-1083 into
4 evidence.

5 THE COURT: Is there any objection?

6 MR. SHELSON: Sorry, Your Honor. I'm looking real
7 quick.

8 THE COURT: Uh-huh.

9 MR. SHELSON: No, Your Honor.

10 THE COURT: All right. PX-1083 will be received into
11 evidence.

12 (Exhibit PX-1083 marked)

13 BY MR. SCHUTZER:

14 Q Did you review this evaluation update when you reviewed
15 person 38?

16 A Yes.

17 Q Was there anything notable about this evaluation?

18 A Yes.

19 Q What was that?

20 A There was -- on the fourth page, I believe, there was a
21 summary of the -- so this was an assessment of his adaptive
22 living skills, which basically measure independent functioning.
23 And there was a paragraph that discussed the decline that he
24 had had over time while in the hospital.

25 Q Is that the paragraph that starts "Previous assessment of

1 adaptive living skills"?

2 A Yes.

3 Q Would you read the last two sentences, please?

4 A Yes. "It is possible that his functioning represents a
5 decline due to living in an institution where health care staff
6 attends to many of his basic needs for him. In other words,
7 person 38 may be able to improve his adaptive living skills,
8 given the opportunity and skills training."

9 Q When was this evaluation completed?

10 A 2011.

11 Q When did you meet him?

12 A I met him in 2018.

13 Q Had he been in Mississippi State Hospital continuously
14 between 2011 and 2018?

15 A Yes.

16 Q In total, how long had he been at the hospital when you met
17 him in 2018?

18 A He had been there almost 12 years.

19 Q Did he need to be there for almost 12 years?

20 A Not in my opinion.

21 Q Why is that?

22 A I believe that there could be appropriate outpatient
23 services developed for him where he would have done well. I
24 think that he is someone who would need certain levels of
25 support, but I think in the right environment, he could have

1 made some gains and would have had opportunities at least to
2 have enrichment that was individualized for him, services that
3 were individualized for him and not ones that were sort of
4 routine within an institution. So I think those things would
5 have helped him.

6 Q In this evaluation in 2011, the psychologist wrote that
7 person 38 may be able to improve his adaptive living skills,
8 given the opportunity and skills training. That's the end of
9 the sentence that you read a few minutes ago.

10 A Yes.

11 Q Did you see evidence that he had, between 2011 and 2018,
12 received skills training while at the hospital?

13 A Not of the kind that would have helped him regain those
14 independent skills.

15 Q You mentioned earlier that adapting living -- or an
16 assessment of adaptive living skills is a measure of
17 independent functioning. Did I get that right?

18 A Yeah. It's broadly looking at how independent are
19 individuals in certain domains.

20 Q Thank you. I was going to ask you what independent
21 functioning was, but you got there for me. For somebody like
22 person 38, who you testified is going to need a level of
23 support when he leaves the hospital, is living in the community
24 different than living in the hospital?

25 A Yes, because, again, I think that it -- there are ways to

1 design an individual treatment plan for him based on his
2 preferences and his specific needs, and if services are
3 designed around the things that he needs specifically as
4 opposed to the generalized things that are provided in larger
5 care settings, then I believe he, A, would be more engaged in
6 his own life and have the possibility of improving
7 significantly.

8 Q When you met him, did person 38 express any of his goals to
9 you?

10 A Can I look at that part of my report?

11 Q Certainly.

12 A Can you remind me what page that was on?

13 Q I can. You start talking about person 38 at page 43.

14 A Okay. As I said, he had difficulty maintaining alertness,
15 and he was difficult to understand because of articulation
16 problems, but he did say a few things clearly. He did say, *I*
17 *wish I was discharged*. He said his needs were to take
18 medication, but he also said he knows how to microwave and
19 knows how to wash clothes, and expressed some of the things
20 that he enjoys doing.

21 Q Did you have concerns about institutional dependence for
22 anyone else that you met in your review?

23 A I have that concern whenever someone is in the hospital for
24 long periods of time. So one of the individuals that I met was
25 a woman -- another woman who had been at the hospital for three

1 years at the time that I met her.

2 Q Which person was that?

3 A That would be person 50.

4 Q Let's turn to page 82 of PX-402. It's the section on
5 person 50. Could you tell us a little bit about her?

6 A Yes. So I met with person 50 at Mississippi State Hospital
7 in February of 2018. At that time, she was a 51-year-old
8 mother of four children who had been at the hospital since
9 April of 2015. Prior to her hospitalization, she had been
10 living with her mother and brother and one of her children, I
11 believe. She had had -- she was on her 24th admission to
12 Mississippi State Hospital at the time that I met her.

13 Q How common is it, in your experience, to meet somebody
14 who's been to a state hospital 24 times?

15 A It -- it would be uncommon to have someone at -- in my
16 experience, go into the hospital frequently, state hospitals
17 frequently now, but back in the time that I worked at the state
18 hospital originally in the 1990s, it was not particularly
19 uncommon.

20 Q How did person 50 feel about being in the state hospital?

21 A She very much did not want to be in the state hospital.

22 Q How do you know that?

23 A By both my interview with her and the review of her medical
24 records.

25 Q What did you learn in your interview with her about whether

1 she wanted to be in the state hospital?

2 A She told me that she had a desire to live independently in
3 her own place, and she had long-term goals that could not be
4 accomplished in the state hospital, one of which was to look
5 after and make sure that her children were happy and healthy,
6 and also to own an art gallery. She also perked up a lot when
7 we talked about employment in general.

8 Q What did you learn from the medical records you reviewed
9 about her desire to not be in a state hospital?

10 A The medical records also reflected that. She -- there was
11 evidence that at times, when other people were being
12 discharged, she would be upset because she was not. So she
13 clearly talked about discharge on a somewhat regular basis.

14 Q Would you flip please in your bind to the tab labeled
15 PX-1084. What is this document?

16 A This is an annual progress note from Mississippi State
17 Hospital by a physician there.

18 Q Is this one of the records that you reviewed about person
19 50?

20 A Yes.

21 MR. SCHUTZER: I move PX-1084 into evidence.

22 THE COURT: Any objection?

23 MR. SHELSON: No, sir.

24 THE COURT: PX-1084 will be received into evidence.

25 (Exhibit PX-1084 marked)

1 BY MR. SCHUTZER:

2 Q What was the date of this annual progress note?

3 A April 2017. April 13, 2017.

4 Q Is the date of dictation April 27th, 2017?

5 A Yes. There's two dates. One is a date of note -- due date
6 of note. The date of dictation was April 27, 2017.

7 Q Would you turn to page 4 of this document, please. In the
8 middle paragraph, the one that starts "The social worker
9 noted." Do you see that?

10 A Yes.

11 Q Would you read -- would you read that paragraph, please?

12 A "The social worker noted in May of 2016, that the psychotic
13 symptoms in this patient were active. She continued to talk to
14 herself. She also made bizarre comments, such as, *My mom is*
15 *waiting outside to take me on pass.* She did have several
16 passes home with family during the past year without problems.
17 She also had periods when she appeared to be irritable and
18 would say, *Why are y'all keeping me here? I've done everything*
19 *right.*"

20 Q What did this tell you about person 50's hospitalization?

21 A Well, if she was going on passes, it told me that she was
22 not considered dangerous. So that was -- and also, it told me
23 that she wanted to leave.

24 Q Why is it significant that she was not considered
25 dangerous?

1 A Well, because, in my view, the reason for any
2 hospitalization is related to keeping people safe. If they're
3 engaged in either active or risk of self-injury or injuring
4 others, then hospitalization is appropriate. But once they
5 achieve some level of stability where the dangerousness is no
6 longer a problem, then their need for hospitalization should
7 have ended.

8 Q Would you look at the next page, please, the third
9 paragraph up from the bottom, "For the next few months." Do
10 you see that?

11 A Yes.

12 Q Could you read the last sentence of that paragraph, please?

13 A "There were not any immediate plans for discharge at this
14 time due to the patient not meeting her goals."

15 Q What was this referring to?

16 A This was referring -- this was referring to the goals that
17 the inpatient treatment team had for her related to
18 acknowledging that she has a mental illness and stating that
19 she would take medications on discharge.

20 Q This refers to those goals as her goals. Do you agree with
21 that characterization?

22 A No.

23 Q Why not?

24 A Because those were the goals the treatment team had for
25 her. They were not ones that she identified individually.

1 Q Is it appropriate to continue to hold someone in a state
2 hospital because they won't promise to take medication when
3 they're discharged?

4 A No.

5 Q Why not?

6 A Well, in the case of this particular individual and in the
7 case of many others, that -- they will not do that, ever. So
8 they are then stuck in a situation waiting for something to
9 happen that's not going to happen. The nature of her illness
10 was such that she did not have insight and did not acknowledge
11 the need for medication. It's clear over 24 hospitalizations,
12 plus the number of years she's been there, that is not going to
13 change. So the treatment plan has to be designed based on that
14 reality. But there are ways to address the concerns that the
15 hospital staff had by accepting that reality and working on it
16 in a different way, rather than trying to push her into a
17 certain way of seeing things.

18 Q Could you give an example to -- of what you mean by ways
19 you could address the concerns about -- around medication
20 differently than what happened in this record?

21 A Sure. So, first of all, there's no need to ever sort of
22 expect that someone will say, *I am mentally ill. I have an*
23 *illness*. Some people do say that, and some people don't. That
24 doesn't mean you don't provide services for them or you don't
25 provide support.

1 So this is an individual who had a clear desire to live on
2 her own, and so I would certainly believe that there are ways
3 to help her get into housing which she would be motivated for,
4 it seems, and work with her on what it takes to keep that thing
5 that she's motivated for. One of those things would be to, you
6 know, get better about managing her mental health. And
7 certainly there are a lot of different ways to address
8 medication on here. And one can use certain kinds of
9 long-acting medications. One can do daily visits, impromptu
10 and help people set up medications, and there's just ways to
11 address this.

12 Q Is there a particular service that would work with person
13 50 in the way you're describing?

14 A Yes.

15 Q What's that service?

16 A PACT.

17 Q You referenced this a bit a few minutes ago. I want to ask
18 a few more questions about it. You talked about when a
19 hospitalization is appropriate. Could you remind us, in your
20 opinion, when hospitalization is appropriate for mental
21 illness?

22 A Sure. I mean, there are times where individuals end up
23 with either an exacerbation of symptoms or some other crisis
24 situation where there are real safety concerns, and there's a
25 concern that any lesser level of care would not be able to

1 manage that -- the safety issues. So people become aggressive
2 or they become self-injurious or they have significant thoughts
3 of either of those things happening and don't feel they can
4 control those impulses, and hospitalization is helpful.

5 Q What circumstances call for admission to a state hospital,
6 specifically?

7 A Well, in my reading and experience, you know, the state
8 hospitals still have a place in many parts of our country, and
9 they are, you know, part of the continuum of care, probably the
10 last safety net place. So in some ways, they, overtime, have
11 evolved to be able to manage the needs of people who are most
12 acutely aggressive or most acutely self-injurious, so people
13 who are more complex and more ill than the average person
14 needing a hospitalization because of the special team working
15 with that population.

16 Q Are there any people for whom long-term hospitalization is
17 the only option?

18 A I would like to -- I would like to say no, but I think that
19 there's still -- there are still some very small number of
20 people where we don't have really other good alternatives to
21 that. So there's a small group, probably.

22 Q Are there any particular characteristics that define that
23 group?

24 A Yeah. I would say that group would be limited to
25 individuals who, rather than having a chronic remitting kind of

1 illness, have a degenerative illness. So individuals who
2 perhaps have some kind of neurodegenerative disorder, where the
3 expectation is not based on our medical knowledge, that there
4 is a way to improve, that it's going to be a declining course,
5 and that would be for individuals who have that declining
6 course, and also exhibit enough agitation or aggression that it
7 would be difficult to manage in other environments.

8 Q Just to make sure we all understand, what is a
9 neurodegenerative disorder?

10 A So it's a brain disease where the process is known to get
11 worse in that we don't have any treatments. Things are going
12 to get worse, and it's not about recovery in that situation.
13 It's really about trying to, you know, help an individual
14 through that process of decline. So things like dementia, a
15 certain kind of dementia, or, for instance, a disease like
16 Huntington's disease. So there's certain kind of well-defined
17 conditions that the expectation that people will improve or are
18 going to learn new skills or be able to recover significantly
19 is not there.

20 Q I want to take a look now at the process that you used in
21 this case to do the work that you did. What were the questions
22 that you were asked to answer?

23 A I know them. I just want to look at them specifically,
24 just to make sure I state them correctly. So the first one
25 was: Does the individual oppose or not oppose living in the

1 community? The second was: Is the individual appropriate for
2 and could they benefit from mental health services and supports
3 available in a community setting? And had -- the third was:
4 Had the individual been offered and had they been receiving
5 appropriate community-based services, would they have avoided
6 hospital admissions, or would they have spent less time in the
7 hospital during a given admission? And finally: Is the
8 individual at serious risk of readmission to a state hospital?

9 Q Did you answer every question for every person?

10 A No.

11 Q When did you not answer every question?

12 A So one individual that I reviewed was deceased. So I was
13 not able to ascertain whether they opposed or didn't oppose.
14 And then when someone was -- in a state hospital at the time
15 that I saw them, I did not answer the risk of readmission.

16 Q Which person -- if you need to look at PX-400 to check the
17 number, please do. Which person was deceased?

18 A Person 48.

19 Q How did she die?

20 A She died while she was in East Mississippi State Hospital.
21 She choked on a sandwich.

22 Q Regarding the question about whether -- about individuals
23 avoiding hospital admissions or spending less time in the state
24 hospital, what factors did you look at to answer that question?

25 A I basically looked at -- I did an assessment based on my

1 review of the records and my interviews with them about what
2 kind of situations led to their hospitalizations, and so what
3 were the kinds of problems that could put them at risk again.
4 And so I basically made an assessment of the kinds of
5 interventions that I thought would be of benefit, given those
6 patterns that they were exhibiting. And for many people,
7 there's a pattern; for some there's not. But just looking at
8 the things that they identified needing support with, looking
9 at what they had available in terms of community services
10 already, and also looking at the disconnect sometimes between
11 what was available and what they were actually availing
12 themselves of, which is kind of a common problem of being -- of
13 individuals being disengaged from treatment.

14 Q How do you know that providing the community services would
15 impact whether a person went to or spent less time in a state
16 hospital?

17 A I know by my experience of doing it, and I -- I think
18 there's ample research that supports that as well.

19 Q Focusing on the question about whether the individual was
20 opposed, how did you go about answering that question?

21 A Generally, by asking them, and people are usually pretty
22 clear about that.

23 Q Were there any individuals who didn't give you an explicit
24 yes/no clear indication?

25 A Not that I recall. I supplemented whatever they said to me

1 also with evidence in their medical records as well.

2 Q How many people did you look at?

3 A Twenty-eight.

4 MR. SCHUTZER: May I approach, Your Honor?

5 THE COURT: Yes, you may.

6 BY MR. SCHUTZER:

7 Q I've handed you what we have marked for identification as
8 PDX-8. Is this a chart showing what you found about these 28
9 individuals?

10 A Yes.

11 Q Let's walk through those findings for a moment. How
12 many -- what proportion of people, of the 28 people that you
13 looked at and answered the question for, did you find were --
14 would have avoided or spent less time in a hospital if they'd
15 been receiving community-based services?

16 A 100 percent.

17 Q What proportion of the people you looked at and for whom
18 you answered the question did you find were at serious risk of
19 going back into a state hospital?

20 A 80 percent.

21 Q What proportion of people for whom you answered the
22 question did you find were appropriate for and would benefit
23 from community-based services?

24 A 100 percent.

25 Q Finally, what proportion of the people who you answered the

1 question for did you determine were not opposed to
2 community-based services?

3 A 96 percent.

4 Q How many of your 28 people were opposed to community-based
5 services?

6 A Again, I could not ask one because she was deceased, but of
7 the remaining 27, one was opposed.

8 Q You've mentioned that you conducted interviews of these
9 individuals?

10 A Yes.

11 Q Were there any people, setting aside -- in addition to the
12 individual who is deceased, were there any other individuals
13 you were not able to personally interview?

14 A Yes. There was one individual who I met at his home, and
15 he gave me permission to speak with his father and stepmother,
16 but he declined to talk, so I was not able to interview him.
17 And then I had several individuals who agreed to be interviewed
18 initially, but because of the level of symptoms they were
19 experiencing, they were rather brief interviews.

20 Q For those individuals who you did not interview or briefly
21 interviewed, how did you gather information about those
22 individuals?

23 A When it was available, through close contact, so family
24 supports. Otherwise, through review of the medical records.

25 Q Did you also interview family members of individuals who

1 you were able to personally interview?

2 A Yes.

3 Q The medical records that you looked at, where -- what
4 entities were those the records of?

5 A So they were from the various state hospitals and also
6 records from the community mental health centers.

7 Q Did you come away from your review of these 28 individuals
8 with any overarching conclusions?

9 A A couple of overarching conclusions. One is that I felt as
10 though they were in need of more comprehensive outpatient
11 services, particularly of the kind that addresses individuals
12 who seemed to be disengaged from outpatient care. So those
13 would be services that go to the individual and work in a
14 particular fashion to develop a therapeutic alliance and do
15 assertive engagement. So there was overarching conclusion that
16 people were not receiving the kinds of services that they were
17 likely to benefit from.

18 And the second was that there seemed to be a reliance, in
19 the absence of that, on families filling in the gap, so
20 families being responsible for making people take meds,
21 families being responsible for any variety of things.

22 And in a number of situations, I saw where that burden on
23 families led to their essentially being burned out by it and
24 then forcing individuals into a group home or personal care
25 home setting that they really did not want to be in.

1 Q Focusing for a moment on the first thing that you listed,
2 that individuals were in need of comprehensive outpatient
3 services, what was the result of people not receiving those
4 services?

5 A So there was definitely evidence that basic services exist
6 in the community mental health centers. By basic services, I
7 mean that they would have an opportunity to meet with a
8 prescriber, some opportunity for nurse visits, some opportunity
9 for some community support staff, but the result of, like,
10 having those -- if people -- if they're not meeting people's
11 needs, then people tend to not take advantage of them. So just
12 being there, if a person doesn't go to them, is not going to be
13 helpful in terms of their recovery or even stability at that
14 point. So I did not see much evidence of very much outreach
15 when people disconnected from treatment. And what I did see
16 evidence of is when they did disconnect from treatment, then
17 they often ended up back in the hospital.

18 Q What impact did going to the hospital then have on these
19 individuals?

20 A Well, the problem with repeated hospitalizations or any
21 hospital is, A, it takes you out of your life while you're
22 there, so it's a big event to go into a hospital. It removes
23 you from the life that you either, A, are leading or would like
24 to work on leading. So it's a bit of time that you can't get
25 back. So the more time one spends in a hospital, the more time

1 one can't get back for their lives and continue to move on.

2 Also, what happens is, after people have had many
3 admissions, then everyone basically says, this isn't working.
4 And the solutions that I saw tend to be ones, again, that
5 aren't very recovery-based. The solutions are, if it's not
6 working, let's now make this person go from the institution of
7 the state hospital to the institution of a personal care home,
8 even if they don't want to. So the solutions become less
9 recovery-oriented over time rather than more recovery-oriented.

10 Q What would be the more recovery-oriented alternative to the
11 solution?

12 A Well, one thing I noticed is that -- and just about
13 everyone I spoke with, the things that they wanted in their
14 lives are things that we all want. So they wanted a stable
15 home. They wanted opportunities to be employed or be engaged
16 in something meaningful. They wanted good connections with
17 their families. So the alternative is, say, well, let's take
18 one of those goals and let's work on that. Let's help someone
19 get stable housing, and then we'll see what kind of supports
20 they need in that housing so that they can maintain it. And
21 then once they're doing that well, then, hey, they want to --
22 they're talking about work. Well, let's see if we can help
23 them get employed.

24 So the alternative is to say, hey, this hasn't been
25 working. We need to try a new approach. We need to try

1 something. Maybe it sounds, you know, drastic. It doesn't to
2 me because I've done it, and I know it works. But rather than
3 get more restrictive, we need to get sometimes less restrictive
4 so people can grow.

5 Q Can you think of an example of one of the individuals you
6 met who was in need of the comprehensive mobile outpatient
7 services that you described?

8 A Yes. There are a number of them. I think person 52 was
9 one of those.

10 Q Can you tell the court a little bit about person 52?

11 A Yes, if can I look at where she is. Do you know what --
12 I've got it. Page 88. So she was an individual that I met in
13 April of 2018 at her home. At that time, she was a 64-year-old
14 woman who was living with her husband of 30 years, and she was
15 a mother. She had a history of many hospitalization, 13 at
16 Mississippi State, also hospitalized at East Mississippi, South
17 Mississippi, some local hospitals as well.

18 And I interviewed her briefly. She was one of the
19 individuals who was experiencing quite a few symptoms on the
20 day that I went, but I also spent a fair amount of time talking
21 with her husband.

22 Q Did you identify a pattern that her hospitalizations tended
23 to follow?

24 A Yes. It appears that -- so this is a woman who had a very
25 supportive family. And as I said, she was married for 30

1 years. And so her pattern was that she would experience a
2 significant level of symptoms, go to the hospital. And
3 usually, by the time she got to the hospital, she had some
4 period of nonadherence to her medication. She would get
5 started on medication again. The level of irritability and
6 agitation that usually was present on admission would decrease.
7 She would have her sort of usual level of psychotic symptoms,
8 which are unchanging for her, but she would go home better.
9 But over time, that would start to fall apart again. So she
10 would get better in the hospital. She would leave. Her
11 husband would do his best to keep her, you know, doing well
12 post-hospitalization. He took a lot of the responsibility for
13 making sure she took medicines and things. But she -- and
14 sometimes she would go to the community mental health center,
15 and sometimes she wouldn't, so variable engagement with what
16 was offered at the community mental health center.

17 Over time, she would deteriorate, and he expressed to me
18 that he would essentially seek hospitalization at the point
19 that he was exhausted because her symptoms were so severe.

20 Q Are there community-based mental health services that can
21 help someone like person 52 get out of this pattern?

22 A Yes.

23 Q What are those services?

24 A Again, this is an individual who would be a good candidate
25 for a PACT team.

1 Q Why, in particular, would she be a good candidate for a
2 PACT team?

3 A Well, she has a number of different needs, and so that sort
4 of comprehensiveness of PACT services, the coordination of care
5 that's available through that would be the best service. She
6 definitely needs to improve on regular medication adherence
7 because it appears that that's helpful to her when she does it.
8 So any variety of medication assistance services. And you
9 know, a team would have to design what that looks like for her.

10 She would be difficult to engage at first, so the very
11 first work of a team would be doing what we call assertive
12 engagement, which is trying to develop some kind of alliance
13 with her around the things that she feels would be important to
14 her, and that's how you start to get in there before you even
15 start talking about medicine.

16 So she's someone that would take awhile to develop the
17 kinds of supports around her and her engagement with it to
18 start to see change. But over time, it would definitely
19 improve. She also had some history of substance use disorder,
20 and so that could be addressed by the team. She also had major
21 medical problems and a concern that she was also disengaged
22 from medical treatment. So PACT teams are very good at that
23 part as well.

24 Q Was she receiving PACT services?

25 A No, she was not.

1 Q Were PACT services available in her home county?

2 A I'm not sure.

3 THE COURT: Do we know what her home county was? I'm
4 looking at this particular record, and I can't tell. That was
5 a question I was going to ask.

6 A I think she was from Rankin, maybe, I believe.

7 MR. SCHUTZER: I don't know that off the top of my
8 head, Your Honor.

9 THE COURT: But we have the information?

10 MR. SCHUTZER: Yes, we do. I'm sure my colleagues are
11 working on it.

12 THE COURT: That's fine.

13 BY MR. SCHUTZER:

14 Q Was she receiving any community-based mental health
15 services that were of the type you described in terms of mobile
16 or assertive, even if it was not PACT?

17 A Her husband described to me that at some period of time,
18 and I'm not exactly sure that I nailed that down, there was
19 some community support, a staff person who did come and tried
20 to be helpful. I think that he described one situation that
21 there was a crisis situation where that person tried to be
22 helpful. But there was nothing -- there was nothing ongoing,
23 assertive, consistent or comprehensive enough to really make a
24 difference in how things were going within their household.

25 Q Was she at serious risk of going back to a state hospital?

1 A Yes.

2 Q Why is that?

3 A It was based on the fact that she had had as many
4 hospitalizations as she did, that she had a history of not
5 adhering to medication, and she had some history of substance
6 use as well. And so all of those things are risk factors for
7 further admissions.

8 Q If she received PACT services, would PACT services change
9 that risk?

10 A I believe it would. I think, you know, my experience of
11 working with an individual like this is that it might take
12 awhile to get to the point of very few or no hospitalizations,
13 but I do think that one could relatively quickly get to fewer
14 and shorter hospitalizations.

15 Q How would the PACT team work with person 52 to achieve
16 fewer and shorter hospitalizations?

17 A Well, first and foremost, as I said, she would be difficult
18 to engage. Based on the kinds of symptoms that she has, her
19 trust level about who's trying to help and how helpful they are
20 going to be is difficult. So there are ways to do assertive
21 engagement. So, you know, developing that alliance. Then
22 helping her with things that she identifies as important to
23 her. So working with her preferences and values so that she
24 starts to have a more trusting relationship, and over time, you
25 know, just being in there all the time, one thing is to be

1 responsive to changes in her condition. So, you know, if she
2 is adhering to medication but she starts to have symptoms,
3 then, you know, teams can get in there and, you know, make a
4 change relatively quickly to avoid crisis.

5 There were a lot of apparently crisis situations within
6 that household. Teams could go out during those and try to
7 diffuse it, try to help the husband have a break at times.
8 There are lots of ways that -- I think he was very much
9 invested in her staying at home, so I think if he had more
10 support and had less to do himself, that I think he would have
11 been able to continue that, and some of the admissions perhaps
12 would not happen because of that.

13 Q Have you provided PACT services to individuals like person
14 52 in your career?

15 A Yes.

16 Q Did those -- did PACT services have an impact on whether
17 those individuals went to state hospitals?

18 A Yes.

19 Q What was that impact?

20 A Definitely decreased the number of times that they went to
21 state hospitals. It was very unusual in my years of doing PACT
22 services that anyone was hospitalized in a state hospital.

23 MR. SCHUTZER: Your Honor, I'm at a somewhat natural
24 break point, I'm happy to continue or happy to take a break,
25 whatever your preference is.

1 THE COURT: We'll go with natural break points any
2 time. Anything less than six weeks is going to be great too.
3 Just keep putting it out there.

4 All right. We'll take a 15-minute break. All right.
5 (Recess.)

6 THE COURT: Is there anything we need to take care of
7 before Ms. VanderZwaag returns to the stand.

8 MR. SCHUTZER: Not from the United States, Your Honor.

9 THE COURT: All right. As I summoned her on here.
10 And if there was something, she would just have to hear it from
11 the stand, I guess. Counsel, you may -- let me ask you, have
12 we figured out where person 52 lives yet?

13 MR. SCHUTZER: We have, Your Honor. The parties will
14 stipulate that she's from Simpson County.

15 THE COURT: Simpson County. Okay. Thank you.

16 BY MR. SCHUTZER:

17 Q Sticking with person 52 for one more minute, could we get
18 PX-413 up on the screen.

19 MR. SCHUTZER: Your Honor, this document was
20 preadmitted.

21 THE COURT: Okay.

22 BY MR. SCHUTZER:

23 Q Dr. VanderZwaag, this is a map showing where -- what
24 counties were covered by PACT teams as of June 30th, 2018. Do
25 you see that?

1 A Yes.

2 Q Do you see where Simpson County is?

3 A Yes.

4 Q What -- were PACT teams available in person 52's home
5 county when you met her?

6 A No.

7 Q And just so it's clear for the record, Dr. VanderZwaag,
8 what's your profession?

9 A I'm a psychiatrist.

10 Q When we broke, we'd been speaking about PACT services for
11 person 52. What is PACT?

12 A So PACT, it's also sometimes known as ACT in my state.
13 It's ACT, but they are essentially the same service. And it's
14 a multi-disciplinary team of mental health professionals who
15 work together in a coordinated fashion to assist people with
16 any number of different interventions. There's a whole host of
17 interventions that PACT teams can provide, based on the various
18 disciplines that work within it. So those include, you know,
19 mental health and wellness, physical health and wellness,
20 permanent supported housing type services, sort of supported
21 employment services, substance use disorder treatment,
22 medication assistance, any variety of case management things to
23 make sure that people have and can keep benefits, work with
24 families, so family psycho-education, individual therapy.
25 There's just a host of different services. And one team of

1 people work together to design a treatment plan and carry out
2 the interventions that are individualized and specialized for
3 each person.

4 Q Where are PACT services -- what sorts of locations are PACT
5 services provided?

6 A All over. They are broadly distributed throughout the
7 United States and a number of other countries as well.

8 Q What types of settings do PACT team members go to to meet
9 with their clients?

10 A Kinds of settings? So a lot of work is done in the
11 individual's home, sometimes at work sites, if you're working
12 on supported employment or job coaching type skills, any number
13 of agencies that the individual might need to interface with,
14 like Social Security or DSS. Then it could be at a McDonald's.
15 It can be at a shelter. It can be attending court with
16 someone. So go where the person needs you at the time.

17 Q How often do -- does -- do PACT team members meet with
18 their clients?

19 A So that's the part that -- so PACT is a -- I think of it as
20 an individualized and flexible service. So it's based on the
21 individual need, and that can change over time, which is one of
22 the benefits of this service. So if someone needs to be seen
23 daily because they're in a period of impending crisis, and you
24 want to prevent that crisis from occurring, then a daily visit.
25 If someone needs daily visits over an extended period of time

1 because the team's working with them on proper medication
2 adherence, then that. But sometimes people need less than
3 that. So anywhere from daily to -- you know, in our state, you
4 need to be seen a minimum number of times per month in order to
5 actually bill Medicaid, so there's a minimum, and then the
6 maximum is sometimes, you know, a couple of times a day.
7 That's very rare. So...

8 Q What does -- I'm sorry to cut you off.

9 A The minimum is, you know, at least weekly, but that would
10 be someone who -- if that's the level of need that they had,
11 that would be someone I would be looking to graduate to another
12 service.

13 Q What does PACT stand for?

14 A Program for Assertive Community Treatment.

15 Q What does the assertive mean in that context?

16 A So assertive means that you -- basically, that you keep
17 trying, that you don't give up on people, that you stay
18 engaged, and you continually make adjustments when there's
19 evidence that an individual is difficult to engage or seeking
20 to disengage from treatment.

21 So one of the things is, many people who get referred to
22 ACT teams have a history of, like, either intermittent
23 engagement with services or complete disengagement from
24 services. So the assertive engagement piece says, hey, there's
25 ways of working with individuals that can actually bring them

1 on board with what you're trying to do. And then you have to
2 be very persistent about it and very sort of -- you have to
3 individualize it to, you know, the particulars of the person
4 that you're working with.

5 Q Is that part of the standard or the definition of PACT?

6 A Yes.

7 Q Is PACT designed for a particular type of client?

8 A Well, yes and no. So there's no singular type, but in
9 general, most of the research showing -- you know, it's
10 effectiveness has been done with a population of individuals
11 who have severe -- sometimes called severe and persistent
12 mental illness or individuals with psychotic disorders who, by
13 their own history, have had any number of particular things
14 that suggest they're not doing well, and regular office-based
15 services aren't working for them. So that could be people who
16 have had frequent hospital admissions, or people who have been
17 in the emergency department a lot, or incarcerated frequently
18 or homeless a lot, or people who are at risk for those things
19 because those are the kinds of situations that, you know, we're
20 trying to prevent, these crises.

21 Q Where do these -- where does this population of individuals
22 fall on the spectrum of how severe their mental illness is?

23 A Many people served by PACT teams do have, some of them,
24 more severe kinds of illness. Again, there's a range. So not
25 everyone being served by a PACT team will look exactly the same

1 or have the same kind of history. But many of them have, some
2 of them, more severe chronic unremitting kind of symptoms.

3 Q Do Mississippi's operational standards for PACT address who
4 is appropriate for PACT services?

5 A Yes.

6 Q Let's take a quick look at that. Would you turn in the
7 binder to the tab labeled JX-60?

8 A Yes.

9 Q You're looking for page 217, using the numbering at the
10 bottom right of the page.

11 A Okay.

12 Q Is this where the eligibility criteria in Mississippi's
13 standards is?

14 A Yes.

15 Q Would you look on the opposite page, page 216 of JX-60,
16 paragraph C?

17 A Yes.

18 Q Is this a section listing who is required to be -- what
19 staff members are required to be on the team?

20 A Yes.

21 Q Do PACT services -- well, let's look at it this way.

22 Earlier you -- when you were describing PACT, you described

23 PACT providing service -- permanent supported housing type

24 services, supported employment type services. What's the

25 difference between receiving employment or housing help through

1 a PACT team versus receiving standalone supported employment or
2 supported housing?

3 A Well, the way PACT or ACT has evolved over time is that
4 evidence-based practices like IPS supported employment or
5 permanent supported housing are embedded within the ACT service
6 now. So ACT itself is an evidence-based practice, and it's
7 really a service platform. And then other evidence-based
8 practices can be embedded within the team so that the team --
9 the difference is that usually with someone who needs PACT
10 services, they need help with a number of different things. So
11 they might need housing support and employment support and
12 support taking their medications regularly, and also need the
13 nurse to come out to their house, because they won't go to --
14 so they need a variety of things.

15 So it's the same service, but it's carried out by the PACT
16 team because they're able to coordinate all of those
17 interventions together. They build a treatment plan based on
18 that variety of interventions that's being offered.

19 Q When is PACT available?

20 A When are the team members available?

21 Q Yes.

22 A So it's considered a 24-hour wraparound service, so 24
23 hours a day, seven days a week, 365 days a year.

24 Q Does -- is there -- do PACT teams address mental health
25 crises for the individuals they serve?

1 A Yes.

2 Q How does -- how do PACT teams do that?

3 A So there are a variety of ways, but usually the standards
4 encourage that the team has someone on call all the time. So
5 one of the things about PACT teams is, you work with a limited
6 number of people at any given time, so the entire team knows
7 what's happening with those individuals, and they know -- the
8 team meets on a daily basis. The team anticipates crises that
9 could happen. So the person on call knows that person, knows
10 what works with them. There's a crisis plan that's been
11 developed by the team. So usually teams are staffed at 12 to
12 16 hours a day with regular interventions, and then after those
13 hours, there's someone from the team on call. And I was -- as
14 a psychiatrist, I was always on call all of the time as backup
15 to the primary person on call so that they could always reach
16 me as well. So there are a number of ways to build in access.

17 Q You just referred to crises. Let's make sure we define
18 that. What is a mental health crisis?

19 A So it's anything that kind of sets someone off course. And
20 it can be a variety of things. It could be related to an
21 increase in symptoms of their illness. It can be related to a
22 change in their environment, such as new conflict in their
23 home, between other individuals, that's destabilizing to the
24 person. It can be an eviction. It could be, you know, someone
25 gets a speeding ticket, and they're distressed by that and

1 they're concerned about that. So things that set someone into
2 a state of disequilibrium, where they feel like they need more
3 support, essentially, or it's evidence to others that they need
4 more support.

5 Q Do PACT services have an impact on whether people are
6 hospitalized in a state hospital?

7 A I believe they do, yes.

8 Q What is that impact?

9 A Well, one thing is, PACT is very -- as I said, the team
10 meets every day and discusses every individual that they're
11 serving with -- serving, and the benefit of doing that is that
12 there are very few crises that develop without the team being
13 aware that something is changing.

14 So most of all, it's a preventative service. It's a crisis
15 prevention service, so when there is crisis, if the team
16 members are responding to that crisis in an effective way,
17 which hopefully they have learned over time what's effective
18 with each individual and they have a crisis plan, then usually
19 you can help people get out of crisis. If you can't do that
20 and keep them safely in their home, sometimes you can help them
21 move to another place, maybe go stay with a friend for a while
22 because things are too tough -- there's all -- many ways that
23 you can help people not end up in a hospital.

24 Obviously, if someone's really struggling and, you know,
25 everything else seems to be, you know, short of safety, then

1 hospitalization sometimes is necessary.

2 Q When was PACT invented?

3 A In the 1970s.

4 Q Now that we've talked about PACT in a little more detail, I
5 want to circle back and talk about how PACT would work for
6 person 52. Can you remind us in a sentence or two who person
7 52 is?

8 A Yes. So this was when I saw a 64-year-old woman who was
9 married for 30 years and living with her husband in Simpson
10 County.

11 Q Was she receiving PACT?

12 A No.

13 Q Was she receiving any mental health services?

14 A Yes.

15 Q What services were those?

16 A She had a prescriber, a psychiatric prescriber at I believe
17 it was Region 8, and she had some -- someone identified as a
18 therapist, so some interactions with therapist as well.

19 Q Were those services adequate for her?

20 A It appeared that she was struggling in spite of those
21 services.

22 Q Why was that?

23 A At the time that I saw her, she was significantly
24 psychotic, and I essentially decided to terminate trying to
25 interview her because of her level of agitation that was

1 developing at her husband, over the course of that brief bit of
2 time. But the -- she'd had a bunch of hospitalizations, and it
3 did not appear that anything was changing in response to those.

4 Q What impacts would PACT have?

5 A So, again, this is a situation where her needs are to
6 develop trust in providers, eventually, hopefully through the
7 kind of work of motivational interviewing, and there are just,
8 again, a number of strategies that can be used to help her
9 become better about taking care of her mental health, adhering
10 to her medications. It would have take some of the burden away
11 from her husband, who it's very difficult to place a family
12 member in the job of having to get medicines into someone who
13 really doesn't want to take medicine. That's a very bad setup
14 for relationships and continuing those.

15 So I think, you know, giving that back to the team and
16 having them do that and let him disengage from that, and then
17 also being available for crisis situations, which there were a
18 number of crisis situations there. I think if the team had
19 come to know her and she could develop some level of trust,
20 then they probably could help deescalate some crises.

21 Q Were there other people you met and reviewed who would
22 benefit from PACT services?

23 A Yes.

24 Q Can you think of another example?

25 A Person 46.

1 Q Before we talk about why person 46 needs PACT services, can
2 you tell us a little bit about person 46?

3 A Yes. It's an individual whom I met at Mississippi State
4 Hospital. He was up there on his 46th hospital admission, and
5 he had 18 in the seven years prior to when I met him. He was
6 68 years old, a gentleman who, prior to admission, was living
7 in his own home, that he had been in the same home for 40
8 years, along with his wife, had essentially been ill since the
9 1970s, and unemployed at the time that I saw him.

10 Q Of the 46 admissions, you write at page 69 of your report
11 that 18 of them occurred in the last seven years. Do you see
12 that?

13 A Yes.

14 Q When was the last time you saw somebody who's been admitted
15 18 times in seven years?

16 A It's been awhile.

17 Q Can you recall treating anyone in the last decade who had
18 had 18 admissions in seven years?

19 A Not anyone that I was treating.

20 Q Is there a pattern to these 46 hospitalizations?

21 A Yeah. I mean, the major pattern is that he's someone who
22 goes into the hospital and gets on medicine and comes out of
23 the hospital and doesn't stay on medicine. That's not
24 100 percent true, but often enough that it's led to many
25 hospitalizations. I think, also, he's someone who one of the

1 intervention that's been tried has been outpatient commitments,
2 and so I think sometimes he's been admitted for a violation of
3 outpatient commitment without actually necessarily showing any
4 signs of dangerousness of things. So there's a number --
5 number of ways that he has ended up in the hospital.

6 Q What is an outpatient commitment?

7 A Essentially, it's a court order that says that people need
8 to present for treatment so that they can't just disengage from
9 it. And it's varies from state to state, so I don't -- I have
10 not read the exact parameters of that in this state, but I have
11 seen evidence in reading the medical records of people being
12 admitted because they violated the outpatient commitment.

13 Q Is violating the outpatient commitment always the same as
14 being a danger to themselves or to another person?

15 A No, oftentimes, it's not.

16 Q When you say oftentimes, it's not, are you referring
17 generally or specifically to the records you reviewed in this
18 case?

19 A To the records I reviewed.

20 Q Would PACT have an impact on person 46's hospitalizations?

21 A I believe it would. Again, I think this is a gentleman
22 who's had a lot of admissions, and he has -- does not really
23 see that he has a mental health problem, and therefore, he
24 can't, therefore, see that he needs medication. So it would
25 take -- and I think he would be a little bit resistant to

1 people showing up and say, I'm here to help. So you need to be
2 knowledgeable about the fact that that's sometimes how an
3 individual's mental illness manifests and just know that there
4 are ways to approach that and eventually start to develop some
5 kind of alliance that could improve his medication here, which
6 would improve his tenure in the community.

7 Q How common is it to come across somebody who may be
8 resistant to receiving services due to lack of insight?

9 A That's pretty common.

10 Q Is there a standard way that PACT teams can respond to that
11 resistance?

12 A Well, PACT teams -- one of the reasons individuals get
13 referred to PACT team is for that very reason. So the same
14 person who doesn't necessarily want PACT services doesn't want
15 any services, yet they keep ending up getting services in the
16 hospital.

17 So the way to do it is to keep trying, A, and have a whole
18 list of strategies about how you might do that. So you keep
19 showing up, and you keep trying to make connection, and you
20 give someone some space and freedom to say no, but at the same
21 time, let them know that, you know, you're trying to be there
22 to be of assistance. One way we would do it would be to find
23 out what that individual wanted help with. So we might want
24 them to take medicines because we think it would be good for
25 them, but that might not be what they're interested in, but

1 maybe they would like help getting to Social Security because
2 they have paperwork to fill out. So you start by helping
3 people with the things that they see as a need, and then over
4 time, you can start to work in some of the other things.

5 Q Are there any standards about how long a PACT team should
6 spend on this process before saying, Okay, enough, this is not
7 going to work for this person?

8 A There's no set amount of time or number of attempts, but
9 the standard is that, you know, people make a very solid
10 consistent, repetitive effort to engage someone in services,
11 and they don't give up if the person says no the first time.

12 The times that you might eventually is if the person has
13 made it so clear by virtue of saying, you know, *I'm going to*
14 *call the police if you show up again*, or, you know, threatening
15 you. You know, short of that, if it's just someone who is
16 resistant, you keep showing up and keep trying.

17 Q How long do people spend, generally speaking, receiving
18 PACT services?

19 A It can vary considerably. When it was first designed, it
20 was thought of as a life-long service, that people would need
21 it long term. My experience is that there are some people who
22 do need it long term, and that because they've improved with
23 the service and it's pretty clear that the -- they still need
24 the frequency of interventions that a PACT team can give, it
25 would not -- it's not good to try to, you know, force them into

1 a less intensive service. But some people do get better after,
2 you know, sometimes a year, or even I've seen individuals
3 improve significantly with -- you know, under a year, when they
4 started getting PACT services, and some of those individuals'
5 improvement is such that they can then go on to, you know, less
6 intensive services.

7 Q Did you meet anyone in your review who is somebody you
8 would expect to be on the shorter end of receiving PACT
9 services?

10 A Let's see. I would say person 41.

11 Q Tell us a little bit about person 41. Page 50 of your
12 report if you need -- I'm sorry, page 53.

13 A So person 41 is someone that I met at his home, where he
14 lives with his father. He's 38 years old at the time that I
15 met him, which was in February of 2018. He's a gentleman who
16 was a father of three, struggling to get or stay employed. No
17 income, no insurance, had a number of hopes and dreams for his
18 family, but he really was struggling financially around that.
19 He had three admissions to East Mississippi State Hospital and
20 also an admission or maybe more than one to the crisis
21 stabilization unit.

22 Q Why did you determine that person 41 would benefit from
23 PACT services?

24 A So I identified a number of needs that he had. So he not
25 only has a major mental illness, but he had a significant

1 substance use disorder. So diagnostically, you know, up to
2 50 percent of people with serious mental illness also have a
3 co-occurring substance use disorder. And having a co-occurring
4 substance use disorder is one of the indicators for
5 recommending PACT services because of the coordination of care
6 and the model that's used for treatment. So mental illness,
7 substance abuse, he really had a need for supported employment
8 because he was struggling with employment on his own.

9 Also, in reviewing his records, there was evidence that the
10 stability of living with dad, while it's basically been there,
11 he really probably eventually would do best moving out on his
12 own, so establishing independent living with supported housing.

13 So it was the number of different needs that he had. And
14 it's clear, when reading his records, that he didn't always
15 make it to community mental health services, and there was one
16 period of time where he essentially didn't show up for about 11
17 months before he presented to the hospital. And there was no
18 evidence that there was any outreach to him to find out what's
19 going on with him. He struggled to maintain access to
20 medication because of his income and that sort of thing. So he
21 just had a variety of needs.

22 Q Did you determine --

23 THE COURT: Hold on for one second. Slow down just a
24 little bit, because you're not taking any breath in between
25 your sentences.

1 THE WITNESS: Okay.

2 THE COURT: Take your time.

3 THE WITNESS: Got it. Thank you.

4 BY MR. SCHUTZER:

5 Q Did you determine that person 41 was at serious risk of
6 going back to a state hospital?

7 A Yes.

8 Q Why is that?

9 A As I said, the kinds of needs and stresses that he was on
10 on a regular basis related to his struggle to have income, his
11 struggle without income, to get to treatment, to afford his
12 medication. Sometimes some conflict with his dad and the fact
13 that there could be, you know, crises that developed within the
14 house. There were just indicators based on, you know, his
15 prior hospitalizations, co-occurring substance use disorder,
16 which increases the risk, and then intermittent medication
17 nonadherence.

18 Q Would PACT have an impact on that serious risk?

19 A I believe it would.

20 Q What impact would it have?

21 A I believe it would definitely decrease his risk.

22 Q Why is that?

23 A One thing is that a PACT team is not going to let someone
24 disappear from treatment for any period of time. They're going
25 to -- if someone is hard to find, they are going to figure out

1 where they are and what's happening with them and try and
2 address whatever's going on.

3 A PACT team could deal with any kind of crisis related to
4 interpersonal conflict and help, you know, remove someone from
5 that for a period of time until things cool down. A PACT team
6 would make sure that someone has ongoing access to their
7 medication, that there's never -- that's never a reason for not
8 taking it is because of lack of access.

9 A PACT team, I think, would be able to work with him in an
10 effective way around harm reduction related to his substance
11 use. He was probably not ready to say he was not going to use,
12 but there's certain harm reduction strategies that one can use
13 to help make sure that that doesn't become a reason for
14 hospital admission.

15 Q What does harm reduction mean?

16 A It means that rather than telling someone who's not ready
17 to stop using a substance, Stop using the substance. It's more
18 about helping them find ways where their use of substances
19 doesn't negatively impact their life in ways that are
20 disruptive, like getting into legal trouble, or getting into
21 fights with family, or ending up in the hospital.

22 Q We started talking about person 41 as somebody you'd expect
23 to spend less time receiving PACT services. Why is that?

24 A For -- one of the reasons is that I think, unlike some of
25 the other people I met, he has a fairly good response to taking

1 medication, and he has an attitude of readiness to take
2 medication, so he's not resistant to that. So I think if he
3 had regular access, that would help. And I think if he had
4 regular access and the team was there to work with him on the
5 things like getting a job or get his own housing, once those
6 things were accomplished and well stabilized, he struck me as
7 someone who could start to do things a little more
8 independently and not need as much support.

9 Q Over time, does going without access to medication cause a
10 person's illness to become more serious?

11 A Yes.

12 Q Once person 41 reaches the point at which you think he
13 might not need as much support as a PACT team would provide,
14 would he need any other support?

15 A He would continue to need mental health services.

16 Q What kind of mental health services would he need at the
17 point where he no longer required the intensity of a PACT team?

18 A I would have to assess that at the time. I'm not sure I
19 could say. Because it would depend on his response and what
20 the residual thing -- needs were.

21 Q Did you meet anyone in your review who was actually
22 receiving PACT services?

23 A I did meet one person, yes.

24 Q Who was that one person?

25 A Person 32.

1 Q Can you tell us a little bit about person 32 on page 23 of
2 your report? Yes, page 23.

3 A Yes. So I met person 32 in April of 2018 at the chancery
4 court offices in Brandon, Mississippi. His conservator is the
5 chancery court clerk in Rankin County, so that's where we met.
6 He was a 26-year-old male at the time that I met him, a
7 gentleman who is deaf and whose primary language is American
8 sign language. At the time I met with him, he was living in
9 his own apartment and had a part-time job, of which he was very
10 proud.

11 Q How many times had person 32 been to a state hospital?

12 A Oh, I believe at least seven.

13 Q How was he -- how was he doing before he started receiving
14 PACT services?

15 A He was really struggling prior to the time that I saw him.
16 So he had gone from Boswell Developmental Center to East
17 Mississippi State Hospital because he was so aggressive at
18 Boswell that the staff there was having a very difficult time
19 maintaining safety. And then it was from East Mississippi
20 State Hospital that he got connected to the services that he
21 was receiving when I saw him.

22 It was a unique situation because he was actually getting
23 some services from one region and some services from another.

24 Q Was there anything else unique about his situation?

25 A He was -- he did not have the more usual psychiatric

1 diagnosis of individuals who receive ACT services. So best I
2 could tell from the assessments, that he was diagnosed with
3 intermittent explosive disorder, and some concern over time
4 about whether he had a developmental disability, but the
5 records were not clear to me about that.

6 Q How did he end up connected to PACT services given this --
7 these unique circumstances?

8 A I think he had a very strong advocate in his conservator
9 who helped push to put together a package of services for him
10 to try to get him out of the hospital system. He seemed to me
11 to be someone who was more likely to be aggressive in a
12 hospital than out, and I think this conservator understood
13 that.

14 Q How was he doing when you met him?

15 A He was doing well on the day that I met him, and I think he
16 was -- he did need a fair amount of support around independent
17 living, and I think he had a -- needed a fair amount of support
18 around maintaining his employment, but he was happy. He was --
19 you know, he had a few minor complaints, but he was 26, so
20 that's kind of normal.

21 Q What was the PACT team helping him with?

22 A Well, again, this is someone who there was a combination of
23 things. So they were largely helping him with medication
24 adherence. And it wasn't that he wouldn't take medicine, but
25 he had a tendency to become a little bit disorganized about

1 when to take and what to take, so trying to help keep up a
2 reliable medication adherence system, then, you know,
3 psychiatric care provider visits.

4 And it was not completely clear to me if it was the ACT
5 team or the Region 8 people who were helping him with the
6 supported employment, but they were all helping with supported
7 housing.

8 Q Did you come across anyone else in your review who was
9 receiving services from two different CMHCs at the same time?

10 A No.

11 Q I want to jump back to person 41 for a minute. He's the
12 gentleman we discussed who your expectation would be that he
13 would be on PACT for a relatively shorter amount of time. And
14 I have a couple of more questions about him. Would you turn to
15 page 55 of your report, please.

16 A Yes.

17 Q In the first full paragraph on that page, the one that
18 begins "Because there are" --

19 A Uh-huh.

20 Q -- you also refer in the next sentence to unbundled
21 services.

22 A Right.

23 Q And you write "Unbundled services, such as those previously
24 offered to him by Weems, are less effective if they do not
25 operate from a perspective of assertive engagement and

1 outreach." What did you mean by that?

2 A So in reviewing his medical records from Weems, it looks as
3 though he had -- they had identified the various needs of
4 mental health treatment, substance use treatment and supported
5 employment, and I think he had been referred to all of those
6 services, but if he -- those were all office-based services, so
7 if he did not go and connect with whatever provider was
8 offering them, then he could get no benefit from them. And
9 there was evidence, in reading that record, that he would
10 disconnect over time or at times from it. So there was no --
11 and there was nobody then calling up and saying, *Hey, it's*
12 *supported employment day. You know, do you have transportation*
13 *here, or should I come to you so we can work on supported*
14 *employment today?* So that kind of -- that kind of difficulty
15 of, like, making sure he got what was being offered.

16 Q And what do you mean by unbundled services, specifically?

17 A So I think of ACT as sort of a bundle of different kinds of
18 interventions and different kinds of expertise. So within that
19 bundle, there's things that you can take out as separate
20 services. So someone can just see a psychiatrist, and that
21 would be fine for a certain individuals. Or someone could just
22 get supported employment, if that's all they need. So you take
23 it out of the bundle.

24 So ACT team is responsible, if someone's on ACT, for doing
25 any of those interventions that the person needs, that they are

1 the sole source of responsibility for that. But you could, for
2 some people who have fewer needs, just take a separate service
3 and offer that service in a different way.

4 Q If unbundled services are provided with a perspective of
5 assertive engagement at outreach, can they be effective?

6 A Yes. I think -- I think for me, I would say if an
7 individual needs more than one or two unbundled services in
8 order to get their needs met -- so if they have multiple needs,
9 it's better to do it through something like PACT because that
10 team coordinates that care.

11 So as soon as you start to get into multiple providers
12 doing different things and no one's talking to each other,
13 that's very confusing and not very effective for people. So
14 it -- if they were assertive, I've seen supported employment
15 work where it's singular service and people are assertive about
16 making sure that people are doing it. So yes, it does work if
17 someone's needs are limited to just one or two areas.

18 Q Let's turn to person 43 at page 59 of your report, PX-402.
19 Can you tell us a little bit about person 43?

20 A Oh, yes, sir. I'm sorry. Yes. Person 43, I met him in
21 March of 2018, at a personal care home somewhere in the Delta
22 region. I cannot remember the name of the town. He's from
23 Bolivar County, though, I believe. He's 63 years old at the
24 time that I met him, and most of his life he had lived with his
25 mom, who -- but in the past -- in the one or two years before I

1 met him, he had been in several personal care homes. He has a
2 history of many admissions, I think 16 Mississippi State
3 Hospital admissions.

4 Q Did you determine that he would be appropriate for PACT
5 services?

6 A Yes.

7 Q Why did you determine that?

8 A Again, based on the diagnosis co-occurring substance use
9 disorder, history of multiple hospitalizations, need for help
10 with medication adherence, and just need in a variety of areas.

11 Q Did Mississippi State Hospital ever identify him as
12 somebody who would benefit from PACT services?

13 A Yes.

14 Q When was that?

15 A I believe it was in 2016.

16 Q Let's take a look in your binder at tab -- at the tab
17 labeled PX-281.

18 A Yes.

19 Q What is this document?

20 A It's called a PACT team tracking form.

21 Q Is it a record from Mississippi State Hospital?

22 A Yes.

23 MR. SCHUTZER: I'd move PX-281 into evidence.

24 THE COURT: Any objection?

25 MR. SHELSON: No, Your Honor.

1 THE COURT: All right. PX-281 will be received into
2 evidence.

3 (Exhibit PX-281 marked)

4 BY MR. SCHUTZER:

5 Q Will you turn to page 11, please, using the numbers in the
6 bottom right of the page.

7 Is person 43 in the second row?

8 A Yes.

9 Q This is the tracking form from February 2016?

10 A Yes.

11 Q What was the results of the referral from Mississippi State
12 Hospital for person 43?

13 A Under the heading that says "County, region, meet criteria
14 but no PACT team in the area." For him it was listed as, "No
15 PACT team in area, Bolivar County."

16 Q Turning way from the mechanics of PACT for a bit, are you
17 familiar with the term "recovery oriented"?

18 A Yes.

19 Q What does that mean?

20 A So offering recovery-oriented services and supports is
21 essentially a way of supporting individuals' recovery. It's
22 recognizing that they are the experts in their lives, and that
23 their goals have value, and that the kind of things that you're
24 offering to help them with are driven by their own needs,
25 preferences, goals and values.

1 Q What is -- specific to serious mental illness, what is the
2 opposite of recovery-oriented?

3 A Well, I would think the traditional medical model is not
4 particularly recovery-oriented. It's a model that is tried to
5 be -- people tried to use it for sort of chronic disease in the
6 management of things that are sort of more chronic but that
7 model works best in acute situations, and, you know, things
8 that can be resolved quickly and not likely to keep coming back
9 and keep coming up.

10 So recovery means that even in spite of things that stay
11 around all the time and are problematic all the time or likely
12 to come up, you still learn to live with that, manage that and
13 lead a full life. So it's more along the lines of, in
14 medicine, kind of the rehabilitation model that people who've
15 had, like, stroke or whatever, the goal is to try to regain
16 functioning again and get back to a normal life. So
17 recovery-oriented mental health care is more in line with that.

18 Q Is there a relationship between recovery-oriented care and
19 whether people are at risk of being hospitalized in a state
20 hospital?

21 A Well, I believe there is, because one of the things is, if
22 you're really working with someone in a recovery-oriented
23 fashion, then hopefully some of that work is successful. And
24 if you're successful, it means that you're meeting individuals'
25 goals. If people have achieved something, whether it's, like,

1 they got married or they had a kid or they got into housing,
2 they're more likely to really want to hold on to those things.
3 So the work just kind of, like, blossoms from there, where
4 people are highly motivated to keep going forward. So I think
5 that has an impact on hospital admissions.

6 Q What is the standard in mental health care as it relates to
7 providing recovery-oriented services?

8 A That is the standard now.

9 Q Did you review any documents regarding Mississippi's
10 policies on providing recovery-oriented care?

11 A Yes.

12 Q Is that the DMH operational standards?

13 A Yes.

14 Q Let's take another look at those. That's JX, Joint
15 Exhibit 60. Generally, before we look at the specific parts of
16 it, what is Mississippi's policy regarding recovery-oriented
17 services?

18 A There's an expectation that their services are
19 recovery-oriented and person-centered.

20 Q Would you turn to page 91 of Joint Exhibit 60. If we start
21 at the bottom of page 90, this is the section on service and
22 program design. Is that correct?

23 A Yes.

24 Q What is their requirement in paragraph B, as in boy, at the
25 top of page 91?

1 A "Services and programs must be designed to provide a
2 person-centered recovery-oriented system of services with a
3 framework of supports that are self-directed, individualized,
4 culturally responsive, trauma-informed, and that provide for
5 community participation opportunities.

6 Q Did you see evidence that the individuals who you reviewed
7 received services that were, in fact, person-centered and
8 recovery-oriented?

9 A Largely, no.

10 Q Before I ask you for an example, let's also make sure we're
11 clear. What does person-centered mean?

12 A Again, person-centered means that the services being
13 offered are driven by the needs of the individual, that the
14 needs of the individual are paramount, and that they are full
15 participants in development of a plan of service.

16 Q Could you give me an example of somebody you reviewed who
17 was not receiving services that were person-centered and
18 recovery-oriented?

19 A Yes. Person 49.

20 Q Can you tell us a little bit about person 49?

21 A Yes.

22 Q Page 79, if you need to check.

23 A So person 49 is a gentleman that I met March of 2018. He
24 was living at a personal care home in the -- somewhere north.
25 I don't know exactly. It's blanked out. And he had been,

1 prior to that, living up -- he was a distance from his own
2 home, which I do know was several hours away. He previously
3 lived with family, but following a hospitalization at North
4 Mississippi State Hospital, he was placed in this personal care
5 home where I saw him. And he told me that he had long-range
6 goals of owning a car, getting married again and having a
7 family. He had previously been married, but I believe his wife
8 was deceased. He had a history of many -- five admissions to
9 the state hospital, and then a number of crisis stabilization
10 unit admissions as well.

11 Q Let's -- let me see if we can help with some of the
12 geography. Could you pull up 413 again. So you're looking at
13 PX-413, which is a map of Mississippi. If you look back at
14 your report, PX-402, at the bottom of page 79, you write that,
15 "Prior to his most recent hospital admission, person 49 was
16 receiving outpatient services at Community Care Region 2 CMHC.
17 Durion the see on map where Region 2 is?

18 A Yes.

19 Q If you flip the page of your report to page 80, the second
20 full paragraph begins, "Person 49 attends CMHC appointment at
21 Life Help, Region 6 CMHC." Let me go back to the map and check
22 where Region 6 is. Do you see that?

23 A Yes.

24 Q Do you recall generally where within Region 6 he was
25 living?

1 A No, I don't. Sorry.

2 Q Did -- we'll go back to your report. Did you determine
3 that person -- what did determine about whether person 49 was
4 at serious risk of going back to a hospital, a state hospital?

5 A I determined that he was at serious risk.

6 Q Why was that?

7 A Based on a number of risk factors, including his multiple
8 past hospital admissions, a history of medication, intermittent
9 medication nonadherence, also a co-occurring substance use
10 disorder. Also, at the time I met him, his extreme
11 dissatisfaction with where he was living and what services he
12 was being asked to participate in. So a number of things.

13 Q What's the connection between risk of hospitalization and
14 his dislike with where he was living and the services he was
15 being asked to participate in?

16 A What's the connection between those?

17 Q Right.

18 A So, if -- as I said, he was being asked to participate in
19 things that were not services that he had requested or
20 identified the need for, so -- and he was living in a place
21 that he appears had not requested and did not identify the need
22 for. So his level of motivation to, you know, get any benefit
23 from those situations was very low, pretty much fighting
24 against them, from just reading the records and where he was
25 living in Region 6.

1 So essentially, you know, there's some identified needs,
2 and they weren't being addressed, because he was not engaged at
3 all with the treatments.

4 Q And what is the link between not addressing identified
5 needs and the risk of going back to a state hospital?

6 A Well, when I talk about identified needs, it's the kind of
7 needs that puts you at risk. So whether it's in making some
8 progress on addressing your substance use disorder that at
9 times can lead to an admission because of setting your mental
10 health off, or whether it's a need to have ongoing access to
11 medication and someone to help you in that process. So an
12 identified need, when I'm referring to them for the most part
13 in these reports, it's around those risks.

14 MR. SCHUTZER: May I approach, Your Honor.

15 THE COURT: Yes, you may.

16 BY MR. SCHUTZER:

17 Q Dr. VanderZwaag, I've handed you what we've marked as
18 PX-1093. It's a TCM progress note from Region 6, Life Help
19 Mental Health Services, about person 49. Do you see that?

20 A Yes.

21 Q Have you seen this document before?

22 A Yes, I have.

23 Q Do you know what TCM means?

24 A I believe it's targeted case management.

25 Q What is targeted case management?

1 A It's a type of case management that's targeted. I don't
2 know exactly how to define it. I'm not sure -- I mean, I've
3 heard it many times, but I'm not exactly sure the parameters of
4 what it does.

5 Q First, if you look at the bottom, in the boxes towards the
6 bottom, that says "Subfacility code, Washington County,
7 Washington County office --"

8 A Yes, yes.

9 Q -- does that refresh your recollection about where he
10 lives?

11 A Probably in Washington County, then.

12 MR. SCHUTZER: I move PX-1093 into evidence.

13 THE COURT: Any objection from the plaintiff?

14 MR. SHELSON: No, sir.

15 THE COURT: Excuse me. From the defendant.

16 MR. SHELSON: I got it. No.

17 THE COURT: All right. PX-1093 will be received into
18 evidence.

19 (Exhibit PX-1093 marked)

20 BY MR. SCHUTZER:

21 Q Would you read the section in the box labeled
22 "Impression/summary of contact"?

23 A Yes. "Individual is making poor progress towards ISP and
24 objectives as evidence of staff member's reprot of the
25 individual not participating in group activities or discussions

1 and being distracted by his notebook. He has shown little to
2 no interest in being at the program. Therefore, he does not
3 comply to directives."

4 THE COURT: Looks like a misspell. It should be
5 reports, probably.

6 BY MR. SCHUTZER:

7 Q From your review of person 49's records, do you know what
8 the notebook is referring to?

9 A I'm thinking he had a note pad, like an electronic note
10 pad, but I don't know for sure.

11 Q Is there -- what does this impression/summary of contact
12 tell you about whether he was receiving person-centered
13 recovery-oriented services?

14 A This note says to me that this was not -- there was not a
15 strong recovery focus because the individual was being asked to
16 participate in things that he did not have an interest in, was
17 not motivated by. And it -- in his response to basically, you
18 know, acting like he had apparently told them, they therefore
19 then saw him as noncompliant. So it's not recovery-focused.

20 Q What would be recovery-oriented?

21 A It would be to say to this individual, *It doesn't appear*
22 *that this PSR program is something that you're interested in.*
23 *What are the things that you would like help with? How can we*
24 *be of help? What are your goals? And then, Let's look at*
25 *developing a service plan that helps you work towards those.*

1 Q From reviewing records about person 49, did you come to
2 understand what his goals were?

3 A Yes.

4 Q What were they?

5 A He wanted to work, and he wanted to live independently.

6 Q How could mental health services assist him in achieving
7 those goals?

8 A They could offer him permanent supported housing and
9 supported employment, but he had a number of other needs, so I
10 think for him, they would be best offered through a PACT team.

11 Q How -- did the fact that he was not receiving
12 recovery-oriented person-centered services impact his risk of
13 going back into a state hospital?

14 A Yes.

15 Q How did it do that?

16 A I think the main risk for him is the developing a sense of
17 hopelessness, feeling like services are not useful to him, but
18 not yet having all of the skills and supports he needed outside
19 of mental health services to be able to stay well on his own.
20 So his hopelessness about what was being offered, his feeling
21 that he was useless to him, and his motivation to do something
22 differently, I think he might make attempts on those on his
23 own, but I think he would have trouble being particularly
24 successful without supports.

25 Q How would that link to his risk for going back into a

1 hospital?

2 A Well, it links to the risk -- so if you're unsuccessful,
3 then you stop taking care of yourself. You might start missing
4 medicines. You might start using more substances. You might
5 forget to go home at night and end up outside. Lots of
6 different things can happen and go wrong once people are
7 feeling hopeless and like no one's listening to me.

8 You know, one of the things about recovery-oriented
9 treatment is, the reason that it helps is because the main
10 focus is to maintain hope. And without that, people go back to
11 old behaviors that have not necessarily been very successful
12 for them.

13 Q So far -- you can put that document to the side. So far
14 we've spent a lot of time talking about services that reduce
15 the risk that people will go to the hospital, and I want to
16 shift gears a little bit and talk about people who do go to the
17 hospital. What did you conclude about whether people could
18 have spent less time in the state hospitals?

19 A There were many instances where I concluded they could have
20 spent less time.

21 Q Why was that?

22 A Well, because, again, I think hospitalizations are
23 necessary sometimes when someone's safety is at stake, the
24 individual themselves or someone else. So getting through any
25 kind of crisis situation where that's true, the goal of the

1 hospital should be to stabilize. So, you know, the opposite of
2 working in a recovery fashion is in a stability fashion. So
3 hospitals stabilize. The recovery work happens outside. So I
4 just feel like there was evidence of people having achieved a
5 level of stability that they should have been -- now be working
6 on outpatient services.

7 Q Why -- why weren't people moving on to outpatient recovery
8 services?

9 A So there are a variety of reasons why some of the hospital
10 admissions were extended. In a number of instances, I saw
11 evidence that the inpatient team kept trying to get significant
12 diminishment of psychotic symptoms. So the fact that
13 individuals were still exhibiting psychotic symptoms was
14 sometimes used as a reason to keep them in the hospital.

15 In addition, it appeared to me that a number of individuals
16 would go in and have extended stays where they were stuck
17 because the treatment team's plan was to move them to a
18 supervised living placement, and sometimes they did not want
19 that, so they were sort of stuck in a battle with the team over
20 that discharge plan. And sometimes, even though people might
21 have gone along with that, they were still waiting for that
22 placement, so they're just stuck waiting for the right place to
23 open up.

24 Q Let's talk about the first reason you mentioned, that the
25 inpatient team was trying to diminish symptoms. Is it possible

1 for somebody to live in the community while experiencing
2 symptoms of their mental illness?

3 A Yes.

4 Q When -- at what point do symptoms, if at all, prevent
5 community-based living?

6 A Well, I think at the point where the -- either the level of
7 agitation or seriousness of risk of danger makes it impossible
8 that someone could sort of stay out without someone noticing
9 and sort of saying, you know, this is a risky situation. So,
10 you know, it's -- determining exactly when is about knowing
11 that individual and trying to figure out like what -- have they
12 functioned before, you know, with this level of symptoms, and
13 you know, were they safe? That safety factor really important.

14 But it's unreasonable to expect that -- I mean, many people
15 do get better with medicines, but only to a certain degree, and
16 that they are left with a lot of symptoms. Those people still
17 deserve a chance to live out in the community and live their
18 lives as fully as possible.

19 Q Let's turn to the second reason you described, which was
20 that the treatment team's plan was for the person to go to a
21 supervised living setting, and the person did not agree with
22 that. Can you give us an example of somebody in your review
23 that this happened to?

24 A Yes. Person 50.

25 Q We talked about person 50, it feels like a lifetime ago,

1 earlier this morning. Can you remind us in one or two
2 sentences who she is?

3 A Yes, she's a 51-year-old, in 2018, woman from -- who had
4 been living with her mom and one of her four children and her
5 brother prior to her hospital admission, and she had had many
6 admissions to Mississippi State Hospital.

7 Q When you met her, where she was?

8 A She was at Mississippi State Hospital.

9 Q How long had she been there?

10 A She had been there for almost three years.

11 Q At the time that you met her, was she appropriate to live
12 in the community?

13 A Yes.

14 Q Was staying in the hospital necessary for her?

15 A No.

16 Q Why do you say that?

17 A Again, we reviewed the fact that her level of safety
18 appeared to have stabilized to the point where she was able to
19 go on regular passes to visit her mom. So safety was no longer
20 an issue. They were essentially waiting for her -- it appeared
21 that they were hoping that her symptoms would change
22 significantly so that she would have insight into her mental
23 illness and would verbalize that she would take medicines as an
24 outpatient.

25 Q Was there -- where did -- where did supervised living come

1 into the equation?

2 A Well, because she had never verbalized that she would take
3 medication as an outpatient, and because prior to this
4 admission, the community mental health center staff had
5 convinced her mom to stay firm and not let her come back, live
6 at home, the inpatient team was recommending that she go to a
7 supervised placement, a group home or personal care home, and
8 she wanted no part of that.

9 Q What alternative was there to supervised living that -- was
10 there an alternative to supervised living that the treatment
11 team was not considering?

12 A Yeah, I believe independent living. I did not see that it
13 was considered.

14 Q What do you mean by independent living?

15 A Permanent supportive housing.

16 Q Would she need any -- in addition to permanent supported
17 housing, would she need any other services?

18 A Yes.

19 Q What would those services look like?

20 A She would need a PACT team as well.

21 Q Did you see any evidence that referring person 50 to
22 permanent supported housing or PACT had occurred?

23 A No.

24 Q Generally, if people were discharged to a supervised living
25 setting at the behest of their treatment team, did that have an

1 impact on whether they were at risk of going back to a state
2 hospital?

3 A So a lot of times people get referred to supervised living,
4 like group homes or personal care homes, because people see
5 that as a solution to the not-taking-your-medicine problem
6 which is pretty common. It's -- it's a solution, although it's
7 not a perfect solution, because even in those settings, people
8 can decide they are not going to take medicine, so it's not
9 100 percent.

10 But again, people going to that kind of setting that's
11 often removed from their communities, their families, their
12 connection, their world, and being told to live there if they
13 really don't want to be there, again, that's very demoralizing,
14 there's lack of hope, there's lack of motivation to do anything
15 different than you've done before. So the risk is high. The
16 risk is high unless someone identifies it as their goal.

17 Q I want to turn to one last topic for the morning, and that
18 is some questions about medication. When people are discharged
19 from a state hospital, is it important to plan for how the
20 person's going to access medication?

21 A Yes.

22 Q Why is that important?

23 A Well, many times the significant intervention of a hospital
24 is to actually get people back on medicine and stabilized, and
25 so you want to be able -- you want them to be able to continue

1 that when they leave so that they don't again become at risk.

2 So sometimes, for some individuals, missing only a few days of
3 medicine is enough to increase their risk significantly. For
4 others, it could be longer. But we do know that missing
5 medications with any kind of regularity can lead to increased
6 risk of readmission.

7 Q What did you find in your review about whether the state
8 hospitals were, in fact, planning for access to medication on
9 discharge?

10 A I found a couple of instances that were concerning to me
11 because people didn't have access on discharge.

12 Q What was the result of those people not having access to
13 medication on discharge?

14 A They were both rehospitalized relatively quickly.

15 Q Who are the two examples that you're talking about?

16 A Person 49 and I believe person 31.

17 Q Let's take them in numeric order. Let's go with person 31
18 first. It's at page 20 of your report. Will you tell us a
19 little bit about him?

20 A Yes. This is a gentleman that I met at Mississippi State
21 Hospital in February of 2018. At the time, he was a
22 55-year-old male. He was on the long-term unit at Mississippi,
23 on his tenth admission to that facility. He had had a number
24 of North Mississippi State admissions as well. And he had
25 previously been living with his mother.

1 Q What happened with respect to access to medications in
2 person 31?

3 A So the records indicated that -- so he's a gentleman who
4 had very significant symptoms and eventually ended up taking a
5 medication called Clozapine, which is a medicine that is more
6 beneficial than others for people who have -- we call it
7 treatment refractory illness, meaning that they don't get good
8 symptom response to other medications. So he was on Clozapine.

9 Clozapine is a medicine that has certain -- more intensive
10 monitoring needs than the average, and there are very specific
11 requirements from the FDA regarding monitoring of it. And that
12 leads to some dispensing registration issues and things like
13 that. So anyway, he got better. He was on -- discharged on
14 the Clozapine, sent home, but mom and he went to pick up the
15 Clozapine prescription, and they couldn't get it because the
16 pharmacy that he used wasn't registered with the Clozapine REMS
17 program, which you have to be to dispense. So, again, nobody
18 followed up to find out.

19 So when we send someone out on Clozapine from a state
20 hospital, A, are they going to a provider who's familiar with
21 that medicine and knows how to monitor it? It has more risks
22 than some others. And then, B, is it -- you know, are they
23 going to be able to get the medicine? Is the pharmacy
24 registered with REMS. So it didn't happen in this case.
25 Anyway, he didn't get it, and so he ended up being readmitted.

1 Q Let's turn, then, to the other example you gave, person 49.
2 He's a gentleman we've discussed already. Can you just remind
3 us who he is?

4 A Yes. He's the gentleman who I met at the personal care
5 home who was unhappy with his programming and things. He was
6 living at a personal care home and had been -- I think he had
7 been discharged from North Mississippi State Hospital in
8 November of the year prior to I met him. So four or so months
9 before I met him.

10 Q Is that November 2017?

11 A Yes.

12 Q What happened with respect to medications?

13 A So it looks like his discharge came up right before a
14 Thanksgiving holiday, and he was going to a new county to live
15 in this personal care home. So when he had his follow-up
16 appointment, which was the week after Thanksgiving, the
17 personal care home provider said that he had been without his
18 medication for four days, related to the fact that the pharmacy
19 that the personal care home utilized wasn't open over the
20 holiday weekend. So he essentially got out of the hospital but
21 had no access to his anti-psychotic medication. By the time he
22 showed up at the follow-up appointment, he had to be admitted
23 to the hospital because he was psychotic again.

24 Q What should have happened before discharge with respect to
25 medication?

1 A So you just need to think about all of the difficulty
2 related to access. Typically, hospitals, or state hospitals,
3 typically will give the individual a supply of medication to
4 take with them, hopefully enough to get to the first
5 appointment with a prescriber. But if not, at least enough to,
6 you know, get through a weekend or a holiday weekend or any
7 kind of thing like that would come up, so that then someone can
8 go with a prescription and get it dispensed.

9 So you just need to think through all of the ways in which
10 things can go wrong and people don't have access to medication.
11 It's just standard in mental health practice to always think
12 about access to things like medicine, or access to anything
13 that might support someone's health and well-being.

14 MR. SCHUTZER: If I could take a minute to confer with
15 cocounsel, Your Honor.

16 THE COURT: Okay.

17 MR. SCHUTZER: Thank you.

18 BY MR. SCHUTZER:

19 Q A few more questions, Dr. VanderZwaag. We talked earlier
20 about recovery-oriented and person-centered approaches to care.
21 What impact -- how does person-centered care impact the chances
22 of avoiding state hospital admissions?

23 A Again, it's really understanding that when, as a mental
24 health service provider, you're hoping to have the individual
25 engaged in whatever activities are going to improve their

1 mental health, that that is best achieved by hearing from the
2 individual themselves, who know themselves the best, what are
3 the things that might help me do that, what are the things that
4 are most important to me?

5 And that process of -- so what we know from psychology is
6 that nothing changes if people aren't motivated. It has to
7 have some level of internal motivation. And sometimes we have
8 to work to bring that motivation out, but if someone's
9 motivated, then you've got something that you can do to push
10 their well-being forward or help them push their well-being
11 forward really.

12 Q We talked about assertive engagement on ACT teams.

13 A Yes.

14 Q Is assertive engagement the standard of care when it comes
15 to ACT services?

16 A Yes, it's standard intervention in ACT.

17 Q Would you turn back in your report, please, to the section
18 on person 46, which is page 70 -- starts on page 69. I'd like
19 you to look at page 70.

20 A Yes.

21 Q Person 46, what CMHC region is he geographically covered
22 by?

23 A Region 8, I believe.

24 Q At the time you met him, did Region 8 have a PACT team?

25 A I don't believe they did.

1 Q We looked at PX-1093. That's the loose one. This is about
2 person 49?

3 A Yes.

4 Q He's in Washington County?

5 A Yes.

6 Q Can we get 413 back on the screen? Does Washington -- is
7 Washington County covered by a PACT team?

8 A No.

9 MR. SCHUTZER: Your Honor, if we could take a
10 five-minute recess before I tender the witness.

11 THE COURT: You tender?

12 MR. SCHUTZER: I want to take a five-minute recess, if
13 that's okay with you, ask one or two more questions.

14 THE COURT: Okay. All right. Let's take a 15-minute
15 recess, and hopefully, you might tender her. And then the
16 State will be able to start up, hopefully, right after that.

17 MR. SCHUTZER: Yes, sir.

18 THE COURT: We'll be in recess.

19 (Recess)

20 THE COURT: Doctor, you can return to the stand.
21 Looks like a lot of papers just to ask one or two questions,
22 there, Mr. Schutzer.

23 MR. SCHUTZER: It will be brief, Your Honor.

24 THE COURT: Okay. You may proceed.

25 MR. SCHUTZER: Underpromise and overdeliver, right?

1 May I approach?

2 THE COURT: Yes, you may.

3 BY MR. SCHUTZER:

4 Q Can we get PX-413 up. Dr. VanderZwaag, I've handed you a
5 document that we've marked as PX-1094. I'll represent to you
6 that it's records related to person 41. What county is person
7 41 from, if you look at the first page of Exhibit 1094?

8 A He's from Lauderdale.

9 Q If you look on this map, PX-413, does Lauderdale County
10 have a PACT team?

11 A Yes.

12 Q Was person 41 ever referred for PACT services?

13 A I did not see any evidence of him having been referred.

14 Q Let's turn back to -- let's keep 413 up. Turn in your
15 report to the section about person 49. Right before we took a
16 break, I asked you about whether the county that person 49 was
17 living in at that time you met him had a PACT team. I also
18 just want to clarify, before he moved to Washington County, he
19 was living in Region 2. Correct?

20 A That's correct.

21 Q Does Region 2 have a PACT team?

22 A It does not appear from that map that they do.

23 MR. SCHUTZER: Thank you. Pass the witness.

24 THE COURT: All right.

25 MR. SHELSON: May I proceed, Your Honor.

1 THE COURT: Yes, you may.

2 CROSS-EXAMINATION

3 BY MR. SHELSON:

4 Q Good morning, Doctor.

5 A Good morning.

6 Q Doctor, you reviewed, I think as we've heard, 28 people.

7 Is that correct?

8 A That's correct.

9 Q And one is deceased?

10 A That's correct.

11 Q And so that leaves 27 living individuals who you either
12 interviewed or attempted to interview?

13 A That's correct.

14 Q And with respect to your interviews of those 27
15 individuals, did those -- did you interviews take approximately
16 an hour each?

17 A They varied, I would say. Approximately an hour would be
18 reasonable.

19 Q Of the 27 individuals you interviewed, at the time of the
20 interview, were five of them in a state hospital?

21 A If can I have a minute just to refresh my memory on that.

22 Q I'll represent to you that person 34, page 32 of 107 -- you
23 may have a sheet there -- person 38, person 46, person 51,
24 person 54.

25 A Yes. Okay. Yes.

1 Q All right. So then that leaves that at the time of the
2 interviews, 21 of the 27 were living in the community?

3 A That's right.

4 Q When you interviewed the 27 individuals in Mississippi, did
5 anyone from DOJ accompany you on the interviews?

6 A Yes.

7 Q Who accompanied you on the interviews?

8 A There were a number of people different days. So Mark
9 Williams, Patrick Holkins, Adrienne Mallinson.

10 Q Did the 28 individuals you reviewed in Mississippi have a
11 range of severity of their serious mental illness?

12 A Yes.

13 Q Did the range include people who were chronically psychotic
14 and at risk of behavioral disruption?

15 A Yes.

16 Q Do you agree that there is no one right kind of medicine in
17 the field of psychiatry?

18 A Yes.

19 Q Doctor, if I could direct your attention to person 32? And
20 you're certainly welcome to look at your report. I believe
21 that person starts on page 23.

22 A Yes.

23 Q What is symptomatology?

24 A So that's a way of describing sort of the range of kinds
25 of -- so when someone has an illness, there are symptoms of an

1 illness. So it's a way of describing the range of symptoms
2 that the individual exhibits related to that illness.

3 Q Did person 32's symptomatology during his last admission
4 before you interviewed him include aggression, agitation and
5 fights on a regular basis?

6 A Yes.

7 Q And when you interviewed person 32, he was not exhibiting
8 any major symptoms. Is that correct?

9 A That's correct.

10 Q And you already testified that person 32 was receiving PACT
11 when you interviewed him?

12 A That's correct.

13 Q Would you look on page 31 of your report, please. What
14 housing recommendation did you make for person 32?

15 A Excuse me, page 31 of my report?

16 Q I think so. I may have written it down wrong.

17 A I think maybe it would be page 25 for person 32.

18 Q Yes, I'm sorry.

19 A What housing recommendation?

20 Q Yes.

21 A So I recommended permanent supported housing.

22 Q Is permanent supported housing what you referred to in your
23 earlier testimony as independent housing?

24 A Independent housing is a broader term than permanent
25 supported housing, so permanent supported housing implies some

1 standards related to that. It's related to affordability and
2 permanency and services offered in support of that. So
3 independent housing could mean just someone living on their
4 own, doing everything by themselves.

5 Q Would you turn to person 34. I believe that's page 31 of
6 your report.

7 A Starts on 30.

8 Q Page 30. If you would turn to page 32 of your report.
9 What housing recommendation did you make for person 34?

10 A I recommended that he be living in a small census group
11 home or an adult foster family situation.

12 Q Is a small census group home a permanent supported housing?

13 A No.

14 Q Is it scatter site housing?

15 A No.

16 Q Is it in the housing that you deemed to be independent
17 housing?

18 A No.

19 Q And why did you believe that one of the housing options
20 that may be available for -- that may be appropriate for person
21 34 is adult foster family setting?

22 A So he was someone who had a variety of -- let's see. I
23 think this is someone who had dual diagnosis of both a mental
24 health issue and a developmental disability, and there was
25 evidence that he had been both in developmental centers and at

1 the state hospitals in the past, and I felt like this is
2 someone who could be moved out in the community, but he would
3 need particular kinds of supports and services that are a
4 little bit different from some I've recommended for other
5 people, largely because of his developmental disability and
6 some of the risks that that could generate. So his need for
7 more ongoing supports on a regular daily basis was evident,
8 based on reviewing his record.

9 So there's a variety of ways to do that. I have seen,
10 again, small census group homes where the activities and all of
11 the enrichment and skills training are designed towards just a
12 few people so that it meets their need very well, but trained
13 family settings can do that as well.

14 Q And trained family setting, adult foster homes, is that
15 independent housing?

16 A No. For that individual, that would be what I would
17 consider more like a supervised housing.

18 Q Doctor, I want to next talk about person 38, and that
19 starts -- person 38 starts on page 43 of your report. Do you
20 remember testifying about person 38 this morning?

21 A Yes.

22 Q Okay. I'm not going to spend a lot of time with him. But
23 does person 38 have a history of being very aggressive?

24 A Yes.

25 Q What housing recommendation did you make for person 38?

1 And I believe that's on page 46 of your report.

2 A So I recommended an individualized supervised independent
3 apartment or small group setting.

4 Q I want to focus on the individualized part. When you made
5 your recommendation for person 38, was it your opinion that in
6 that setting, person 38 would need one-to-one supervision?

7 A Not necessarily. I don't think that I -- so when I said
8 small group setting, I didn't necessarily think that needed to
9 be one-to-one staff. It would depend on who the person is
10 living with and whether a single staff could manage. For him,
11 at the time I did the assessment, I was thinking he would need
12 24-hour staff available.

13 Q At the time that you thought that, why did you think that?

14 A Because he was -- again, this is someone who had not very
15 high level of independent functioning. I think he's last --
16 the testing that I referred to said that he would function at
17 the level of a four-year-and-some-month-old individual. So he
18 had broad needs for assistance with -- in a variety of domains.

19 Q This is Exhibit PX-1083, and it concerns person 38. Do you
20 remember discussing this exhibit this morning? It should be in
21 your binder.

22 A Yes.

23 Q Okay. I wanted to direct your attention to the page on the
24 bottom that says page 312, and the part here that's
25 highlighted. Does it read that "The community living skills

1 domain assessed person 38's ability to successfully use
2 community resources performed in an employment setting and
3 assumed social and economic requirements encountered in the
4 community setting relating to time and so on"?

5 A Yes.

6 Q And what is the community skills -- living skills domain?

7 A I'm not -- I'm not particularly familiar with the exact
8 tests that were used. So I know that, again, that they were
9 measuring activities of daily living from probably basic
10 things, such as hygiene and access to food and things like that
11 to more broad things, like ability to use transportation,
12 public transportation, or to manage money and things. So I'm
13 not -- I don't know that particular test that they were --

14 Q Okay. But in any event, at least the records state, below
15 the sentence that's highlighted, "Person 38's community living
16 skills are very limited to negligible, with his performance
17 comparable to that of the average individual at four years,
18 three months"?

19 A Yes.

20 Q Doctor, the next person I'd like to ask you about is
21 another person discussed this morning, and that's person 41.
22 Person 41 starts on page 53.

23 A Yes.

24 Q Did person 41's symptomatology during his last
25 hospitalization, before you interviewed him, include paranoia,

1 uses of associations, disorganizations, some of bizarre
2 thoughts, impaired insight and impaired judgment?

3 A Yes, that's what the clinical notes from that admission
4 state.

5 Q And when you interviewed person 41, was he pleasant,
6 appropriate and not psychotic?

7 A That's what I remember him to be. I'm assuming I wrote
8 that down in here somewhere too, but yes. Yes.

9 Q The last person I'm going to ask you about at this time
10 is -- well, it's not, actually -- person 51. Person 51 starts
11 on page 85.

12 A Yes.

13 Q And when you interviewed -- when you interviewed person 51,
14 was she at Mississippi State Hospital?

15 A Yes.

16 Q Did person 51 tell you that she did not feel she was ready
17 to leave Mississippi State Hospital?

18 A Yes.

19 Q Doctor, I'm going to next ask you about person 50. Starts
20 on page 82. And do you recall testifying about person 50 this
21 morning?

22 A Yes.

23 Q And do you recall looking at this exhibit in connection
24 with person 50, which is PX-1084?

25 A Yes.

1 Q You see on here where it says the clinician is Robert
2 Maddux, M.D.?

3 A Yes.

4 Q All right. I'm going to refer you, Doctor, to page 211 of
5 Exhibit 1084. The first sentence I have highlighted, "She is
6 considered dangerous to herself and others because of her
7 inability to care for herself and active psychosis, if not
8 maintained, in a structured and supervised environment." Did I
9 read that correctly?

10 A Yes.

11 Q I want to refer your attention to the sentence that starts
12 here. "She also poses a danger to others if unsupervised, and
13 that she is paranoid and thinks others have a conspiracy out to
14 get her, including her elderly mother. She also believes she
15 was shot at while on building 63, when she was first admitted
16 to Mississippi State Hospital this admission. She has a
17 history of assaulting her mother and history of thoughts of
18 physical harm to others and has made threats in the past." Did
19 I read that correctly?

20 A Yes.

21 Q All right. And then turning the page, Doctor, to page
22 212 -- yeah, page 212 of Exhibit 1084, this sentence here, does
23 it read, "Building 845: She had a hearing with the judge while
24 on Building 45"?

25 A Yes.

1 Q Do you know anything about that hearing with the judge?

2 A I imagine it was related to renewal of her commitment, but
3 I don't know any -- that's a guess. I don't know.

4 Q All right. Doctor, last thing on this exhibit, this
5 highlighted sentence, does it read, "Barriers to discharge at
6 this time. Grave impairment, noncompliant as an outpatient, 24
7 admissions to Mississippi State Hospital, refused any placement
8 but home with an elderly mother whom she endangers with her
9 spraying of chemicals and her threatening behaviors"?

10 A Yes, that's correct.

11 Q Doctor, now this is the last one I think I'll ask you
12 about, person 54. Person 54 starts on page 94 of your report,
13 and I do not believe you discussed person 54 this morning.
14 Have you had a chance to look, and do you know what person I'm
15 talking about?

16 A Yes, sir, I do.

17 Q Does person 54 have a forensic history?

18 A Yes, he has a forensic history.

19 Q And in the field of psychiatry and mental health, what does
20 forensic mean?

21 A It means that an individual has had interfaces with the
22 law, and so forensic psychiatric patients are typically ones
23 who are receiving treatment, but at the same time under some
24 kind of monitoring related to a criminal activity.

25 Q At least based on your review of the records, what is

1 person 54's forensic history?

2 A It looks as though -- I'm going to take a minute to read
3 it. It looks like he had -- I'm not sure that he had forensic
4 hospitalizations, but he had served several years at Parchman
5 State Penitentiary.

6 Q For robbing a grocery store with a knife?

7 A Yes.

8 Q At the time that you interviewed person 54, had he been at
9 Mississippi State Hospital since April 2012?

10 A Yes.

11 Q All right. After you interviewed person 54, did you learn
12 that he had been discharged to a new four-bed group home
13 operated by Hinds Behavioral Health Services and funded by the
14 Mississippi DMH?

15 A I did hear that, yes.

16 Q Doctor, this morning you testified -- and this is about
17 person 52. So you're welcome to look, but I wanted to ask you
18 something about your testimony regarding person 52. You
19 testified it would take awhile to engage person 52 in PACT
20 services. What do you mean by a while?

21 A I can't give it an exact number, but in my experience of
22 working with individuals like person 52, the assertive
23 engagement piece, the part of just having her be accepting of
24 why you're there and that you have something to offer, and it
25 might actually make her life better, that piece can take

1 months. It's not -- and in the process of those months, if
2 people go in and out of the hospital regularly before you
3 started the service, you might still have some of that early on
4 in treatment. But once you've made an effective -- talking
5 about therapeutic alliance with someone, in other words, they
6 no longer distrust or resent your presence, but they see you as
7 someone who's been helpful to them in the past, and therefore,
8 hopefully, will be helpful going in the future, then you can
9 start to have an impact on some of the other things that lead
10 to hospital admissions and stuff.

11 Q So at the initial phase of PACT team engagement with an
12 individual, how frequently may the PACT team have to visit with
13 that individual at the beginning, for a person like person 52?

14 A So for someone like her, I -- what you don't want to do is
15 overwhelm her, so what you want is a long-term service
16 connection, not doing anything quickly. That's not helpful.
17 You know, her history is longstanding.

18 And so for someone like her, I think attempts would be
19 made, you know, a few times a week, probably two, so you don't
20 want to all of the sudden come in like, you know, the cavalry
21 and say, We're here to save you. You just gradually start to
22 have her get used to you. I might take it slow with her and
23 only send one or two people out to start, to first -- so with a
24 team of people, for people who are difficult to engage, you
25 start with just a couple of those team members trying to do it

1 so you don't overwhelm the person again. So...

2 Q You're obviously very familiar with PACT teams in North
3 Carolina?

4 A Yes.

5 Q Do PACT teams in North Carolina have peer support
6 specialists on the team?

7 A Yes.

8 Q What are the disciplines or the professions on the PACT
9 team in North Carolina?

10 A Psychiatrists, nursing staff, master's level team leader
11 who's usually also a therapist, substance abuse specialist,
12 vocational specialist, and peer support specialist, as well as
13 a kind of administrative coordinator. I can't remember the
14 name of that person.

15 Q So in North Carolina, how many peer support specialists are
16 on the team?

17 A One. At least one. Has to be at least one.

18 Q In North Carolina, on PACT teams, is the -- is it common to
19 have, say, two peer support specialists, so in addition to
20 helping the PACT team clients, the peer support specialist can
21 be a peer support specialist for each other?

22 A For each other?

23 Q Yeah.

24 A Oh, so that they are actually peers to each other on the
25 team?

1 Q Yes.

2 A That's -- I have not run across that.

3 Q Doctor, I want to ask you about Exhibit P-281. Do you
4 recall this exhibit from this morning?

5 A Yes.

6 Q I'm going to be very brief. I mean, we all agree that
7 there are PACT teams in some areas of Mississippi, and there
8 are not PACT teams in other areas of Mississippi. Is that
9 correct?

10 A Yes.

11 Q Okay. The only point I want to make about this is because
12 you recall earlier, there was a discussion about an individual
13 on this document who was in a county that did not have PACT
14 services available?

15 A Yes.

16 Q If you just flip through pages 1, 2 and 3, however far you
17 want to go, are there a number of individuals here who were, in
18 fact, accepted on PACT teams?

19 A Yes.

20 Q Doctor, I want to ask you a few questions about your
21 current employment. In July 2018, did you become the chief
22 medical officer at Central Regional Hospital?

23 A I became one of the deputy chief medical officers.

24 Q Okay.

25 A At Central Regional.

1 Q Did I refer this morning -- well, this afternoon now, I
2 think, Central Regional Hospital as CRH?

3 A Yes.

4 Q Where is CRH located?

5 A It's in Butner, North Carolina, which is in the central
6 part of the state.

7 Q As we sit here today, are there three state hospitals in
8 North Carolina?

9 A Yes.

10 Q And is CRH one of them?

11 A Yes.

12 Q And the other two are Cherry Hospital?

13 A Yes.

14 Q And is it Broughton?

15 A Broughton.

16 Q Thank you. What are your duties as one of the deputy chief
17 medical officers at CRH?

18 A So I have a number of duties. Broadly, the ongoing one is
19 to oversee the clinical care and planning and implementation
20 and monitoring of clinical care on the adult admissions unit
21 and also on the forensic units. Additional responsibility is
22 to make sure that we have adequate -- we call it throughput,
23 but that, you know, people are coming in and going out of the
24 hospitals, so working really hard to kind of maintain that
25 movement of individuals through the system.

1 Q So not to ask the obvious, but so the record is clear,
2 adult admissions unit, is that for adults with SMI, inpatient?

3 A That's right. It's the acute units for adults, yes.

4 Q Does CRH have approximately 400 beds?

5 A Approximately. A little less, yes.

6 Q How many of those beds are for the adult psychiatric unit?

7 A I believe approximately 140.

8 Q So excluding forensics, this question only concerns adult
9 inpatient beds. What are the criteria for admission for

10 adult -- for an adult inpatient psychiatric bed at CRH?

11 A The criteria for admission are that an individual has a
12 mental illness, and at the time that they are presenting, they
13 are dangerous to themselves or others.

14 Q To your understanding, is that essentially the same
15 admissions criteria for a Mississippi State Hospital?

16 A I believe it probably is, yes.

17 Q You testified this morning one of the things you reviewed
18 in Mississippi with respect to the 28 individuals you reviewed
19 was whether they would have avoided or spent less time in a
20 state hospital had they received reasonable community-based
21 services. Is that correct?

22 A That's correct.

23 Q All right. Have you -- since you've been at CRH, have you
24 made a similar analysis at CRH?

25 A It's one of the things that -- part of my job is to pay

1 very close attention to the length of stay and why individuals
2 are still there, and what barriers might be in the way of
3 discharge and working to break down those barriers. So it's
4 certainly -- it's not something I haven't seen before.

5 Q You've been at CRH for roughly a year?

6 A Right.

7 Q Coming up on a year. In that time, have you been able to
8 determine whether there have been patients there who would have
9 avoided hospitalization had they received reasonable
10 community-based services in North Carolina?

11 A Yes.

12 Q Have -- can you, as you sit here today, can you quantify
13 that in any way?

14 A I don't think I can quantify it.

15 Q Are you able, in your time at CRH, to make any
16 determination regarding what percentage of patients at CRH are
17 appropriate for and would benefit from community-based
18 services?

19 A The majority of them are appropriate for and would benefit
20 from community-based services. So there's -- as I said before,
21 there are some very limited circumstances where I think
22 treatment is -- should be in the hospital on a long-term basis.

23 Q Are there any -- strike that. In your experience at CRH
24 since July 2018, when an individual is admitted to CRH, is that
25 the most integrated setting appropriate to his or her needs at

1 that time?

2 MR. SCHUTZER: Objection, Your Honor, calls for a
3 legal conclusion.

4 THE COURT: Objection overruled.

5 A Can you repeat the question.

6 BY MR. SHELSON:

7 Q Yes, ma'am. Okay. Based on your knowledge of being at CRH
8 since July of 2018, when an individual is admitted to CRH, is
9 CRH the most integrated setting appropriate to that
10 individual's needs at the time of admission?

11 A So when someone is admitted to the hospital, I don't
12 consider it an integrated setting, so it's a hospital
13 admission. It's meant to be temporary, meant to achieve
14 stability and then get them back into, hopefully, an integrated
15 community setting. So we admit people to CRH if they are
16 dangerous to themselves or others. So at the time, they need
17 hospital admission.

18 Q So you believe at that time -- strike that. So at the time
19 they're admitted, is that a necessary hospitalization?

20 A Yes. I believe, generally, that's true.

21 Q All right. Doctor, you briefly referred to the length
22 of -- length of stay at CRH earlier. As you sit here today, do
23 you know what the average length of stay is at CRH?

24 A No, I don't know where -- I don't know the current average
25 length of stay. It would be different for different units

1 because we serve different populations, so -- within the
2 hospital.

3 Q Do you know the average length of stay for the adult
4 psychiatric unit?

5 A The acute admission unit?

6 Q Yes.

7 A I cannot -- it's a guess because I haven't seen the recent
8 figures, but I would say probably about 40 days.

9 Q Is there a waiting list for admission to CRH?

10 A Yes.

11 Q Is CRH certified by the joint commission?

12 A Yes.

13 Q What is the joint commission?

14 A It's an accrediting agency that does thorough surveys of
15 all of the treatment at hospitals and safety measures and
16 things of those sorts. They also monitor CMS standards around
17 certain things.

18 Q And they do that for general as well as psychiatric
19 hospitals?

20 A That's right.

21 Q So, to your understanding, what is the significance of
22 certification or accreditation by the joint commission?

23 A Well, I know it's essential. I'm fairly certain that not
24 being certified could lead to barriers around some federal
25 funding or -- I don't know the details. I'm not that familiar.

1 I know the certification process, we just went through it, but
2 I'm not sure what would happen if you weren't certified.

3 Q And I'm sorry. I don't remember exactly how you put it
4 this morning, but when you were -- I forgot the phrase you
5 used. Again, I apologize. But you were talking about
6 dependence in an institution.

7 A Yes.

8 Q I'm sorry. Do you recall the phrase?

9 A I think the phrase that I had put in one of my reports was
10 institutional dependence.

11 Q Thank you. What -- what do you do at CRH to counter the
12 possibility of institutional dependence?

13 A Now, I think it's something that hospitals have to be
14 constantly aware of. The main way to counter it is to get
15 people into more integrated settings than a hospital as soon as
16 possible. So that's what we do, is we work very hard to try to
17 get people to settings which are able to meet their needs in a
18 better way than a hospital can.

19 Q Does Mississippi have a shortage of state hospital beds?

20 A I don't know.

21 Q Is PACT reserved for certain diagnoses?

22 A Certain diagnoses are more frequently served by PACT teams,
23 but in my experience, it doesn't have to be reserved for those
24 diagnoses.

25 Q What is a service definition?

1 A Service definition is essentially a document that lays out
2 what the elements of a service are and who can deliver it and
3 the frequency of -- so it lays out the way that a service is
4 defined and delivered. I speak of them in regard to, like,
5 Medicaid service definitions. So in order to be able to bill a
6 Medicaid service, you have to meet the requirements of a
7 service definition.

8 Q Do most service definitions of PACT have very specific
9 criteria to meet a medical necessity?

10 A They have -- yes, they do.

11 Q What does it mean to meet medical necessity?

12 A It means that -- well, some medical necessities, it -- are
13 the things that are defined matching what the service has to
14 offer. So you basically want to have a good match between a
15 service that's being recommended and the person that it's being
16 recommended for. So medical necessity says, yes, this person
17 actually does have all of those things that this service has
18 been shown to be helpful with.

19 Q I believe you testified this morning that PACT serves a
20 limited number of individuals?

21 A That's right. The team size is limited, yes.

22 Q Okay. So when you say it serves a limited number of
23 individuals, what do you mean?

24 A I mean that each team has a maximum number of people that
25 they are working with at a given time, and that's because the

1 service definition defines the client-to-staff ratio very
2 explicitly.

3 Q And although that ratio may vary from place to place, is it
4 typically a ten-to-one ratio?

5 A Yes.

6 Q The higher number being patient, the lower number being
7 staff?

8 A Yes.

9 Q And is the ratio in North Carolina 9 to 1?

10 A Nine to 1 for medium size and large teams, I believe.

11 Q So let's focus on the medium size to large teams. So then
12 what would -- what is the maximum capacity of a medium to large
13 team in North Carolina?

14 A Medium, I believe, is from 50 individuals being served up
15 to 74, and then the large team would be from 75 up to 120.

16 Q And are there more staff members on the large team?

17 A Yes.

18 Q In North Carolina, are there any prior approval
19 requirements for PACT?

20 A So we have -- we get services authorized through MCOs,
21 which are our managed care organization for mental health.

22 Q Are there guidelines on how frequently new patients can be
23 added to a PACT team?

24 A Yeah, the recommendation for adding new clients to a PACT
25 or ACT team is no more than four or five individuals per month.

1 Q Why is that a guideline?

2 A Well, because when people are referred to PACT, they're
3 typically referred to the team at a time of high need, so
4 usually individuals requiring PACT services are identified,
5 like, through a hospital admission or some other kind of high
6 need situation. The team doesn't know them yet, and so it
7 takes awhile, those initial assessments and developing a crisis
8 plan and doing that engagement to -- you don't want to
9 overwhelm by having too many people with too high needs so that
10 everything falls apart.

11 It's really managing the resources of the entire team,
12 because as you're bringing new people on, you still have
13 responsibility for everybody else who's achieved something
14 stability, and you don't want to overwhelm the system.

15 Q Can the limitations on the number of individuals that can
16 be added to a PACT team per month affect whether a particular
17 PACT team is operating at full capacity?

18 A Yes. It takes awhile to build up to full capacity.

19 Q To your understanding, is PACT approximately 40 percent
20 effective in reducing hospitalizations?

21 A Yes. Yeah, I think that it's one of the services that's
22 been shown to reduce the use of hospitalizations. I think
23 about 40 percent.

24 Q Is one of the reasons why PACT isn't successful for
25 everyone because some people have very bad illnesses?

1 A I don't -- I don't think it's necessarily the level of
2 illness. I think that some people are extremely difficult to
3 engage, and I think that usually is illness related. So that
4 doesn't mean that their illness is more severe. It's just an
5 element of their illness. So people who actively or repeatedly
6 consistently avoid any contact with the team, it's not going to
7 be successful with.

8 MR. SHELSON: May I approach the witness, Your Honor?

9 THE COURT: Yes, you may.

10 BY MR. SHELSON:

11 Q Doctor, this is your deposition from September 2018. I
12 want to refer you to -- there's line numbers in the left
13 margin. I'm going to refer you to page 27, starting at line 9.
14 Would you just read that and then your answer to yourself,
15 please, and tell me when you're done.

16 A (Witness complied with request.) Yes, I see that.

17 Q So the question was at line -- page 27, line 9, "Why isn't
18 ACT successful for everyone?" And at line 13, starting at line
19 13, did you say, "Some people have very, very bad illness"?

20 A I did.

21 Q And then you said, "Some people really don't -- even if you
22 try really hard to engage, really don't want treatment."

23 A Yes.

24 Q So you agree that -- well, let me back up. You said this
25 morning that assertive means you have to keep trying to get

1 people to have the service in some instances?

2 A That's right.

3 Q But even with that in mind, no matter how hard you may try,
4 there's some people who are not going to take the service?

5 A In my experience, there are some people who will not, yes.

6 Q Before you started working at CRH in July 2018, were you on
7 a PACT team in Chatham County, North Carolina?

8 A Yes.

9 Q And back then, how often did the Chatham PACT team, on
10 average, see patients per month?

11 A Per month, on average, probably about ten times per month.

12 Q And was the Chatham team limited to enrolling no more than
13 four new patients per month?

14 A We generally did that. I wouldn't say we 100 percent of
15 the time didn't have five, but we -- generally, four was -- no
16 more than that, yes.

17 Q Doctor, this morning you testified that PACT services are
18 broadly distributed throughout the United States. Do you
19 recall that?

20 A Yes.

21 Q What do you -- what do you mean by broadly distributed?

22 A Meaning that there are many states that have PACT services.

23 Q Do you know what the SAMHSA national outcome measures are?

24 A I'm sure I've heard of them, but I don't follow them,
25 generally.

1 Q Do you know whether there's a SAMHSA outcome measure for
2 the penetration rate of PACT services among adults with SMI in
3 the nation?

4 A I haven't seen it.

5 Q Okay. I'll move on, then. Based on your experience, is
6 housing the biggest challenge for ACT teams?

7 A I would say housing was probably the biggest challenge,
8 yes.

9 Q And when you were on a PACT team, I think you said for 18
10 years, was housing the biggest challenge because there was not
11 enough affordable housing in North Carolina?

12 A That's what we struggled with, yes. So affordability and
13 availability were -- once people had housing, that was not as
14 much of a struggle to help them maintain it, but finding it and
15 being able to afford it, yes.

16 Q Doctor, in the notebook in front of you is J-60,
17 Mississippi Operational Standards.

18 A Yes.

19 Q Do you recall reviewing that document this morning?

20 A Yes.

21 Q And your attention was directed to the PACT section, which
22 I believe is Chapter 32, maybe page 205. I did not bring that
23 document up here with me. Is that right?

24 MR. SHELSON: May I approach, Your Honor.

25 THE COURT: Yes, you may.

1 A It looks correct, 205.

2 BY MR. SHELSON:

3 Q Now, you reviewed the Mississippi operational standard for
4 PACT previously?

5 A Yes.

6 Q Did you have any problem with that document?

7 A No. I thought it was a reasonably good document.

8 Q Doctor, do you hold North Carolina's mental health system
9 out as a model for Mississippi?

10 A No.

11 Q Are there unmet needs for adults with SMI in North
12 Carolina?

13 A Yes.

14 Q Are you aware any of states that have no unmet needs for
15 adults with SMI?

16 A I'm not aware of any.

17 Q Do you agree that there are barriers to adults with SMI in
18 both Mississippi and North Carolina to receiving
19 community-based services?

20 A I agree there are barriers in both places, yes.

21 Q As we sit here today, are there gaps in North Carolina's
22 mental health service delivery system?

23 A Yes.

24 Q Do you agree that in North Carolina, there is a need to
25 balance the system with more prevention in other

1 community-based services that can decrease the need for higher
2 levels of care?

3 A Yes.

4 Q Do you agree that in North Carolina, state funding for
5 mental health and substance abuse treatment services is
6 inadequate to meet the needs of the uninsured and underinsured?

7 A I don't know that the issue is a monetary one. What I will
8 say is I do know throughout my time in mental health that
9 having enough money for mental health services has been a
10 problem.

11 Q Is North Carolina -- is North Carolina's mental health
12 system complex and not well understood?

13 A It's complex. I think it -- at the level of the individual
14 seeking services, it oftentimes is not well understood, and
15 that is a problem that we have at this point.

16 Q I don't have a lot of time, so I'm going to do this as
17 succinctly as I can. Is that, in part, because at some point
18 North Carolina switched to a private provider base?

19 A Yes. The private provider base has made things -- it's
20 less clear to individuals where to get care with -- there are
21 multiple private providers as opposed to the single
22 county-based community mental health center that used to be
23 there.

24 Q So before North Carolina went to a private provider base,
25 it had a regional system of mental health centers similar to

1 what Mississippi has now?

2 A Similar, yes.

3 Q Yeah. So what -- what is the private provider base?

4 A So the private providers mean that -- so local county
5 governments no longer can provide services, so that basically
6 they split off from management and contracting for care and
7 service delivers. So service delivery became a private
8 enterprise and therefore a number of different -- a large
9 number of providers now are throughout the state in various
10 areas. There's some big providers, and then there are some
11 smaller ones, and they're all disbursed around.

12 Q Doctor, in your experience in North Carolina, why do people
13 have difficulty understanding where to go for mental health
14 care?

15 MR. SCHUTZER: I'm going to object, Your Honor. This
16 line of questioning is irrelevant to Dr. VanderZwaag's opinions
17 about what the clinical needs are of the people she met in
18 Mississippi and the mental health services that would meet
19 those things.

20 THE COURT: Objection -- I'm sorry.

21 MR. SCHUTZER: I apologize. We're now getting into
22 policy and planning questions that Dr. VanderZwaag did not
23 offer opinions on.

24 THE COURT: Okay. Objection overruled.

25 BY MR. SHELSON:

1 Q You need the question repeated?

2 A Yes, please.

3 Q Yes, ma'am. Okay. In your experience, in North Carolina,
4 why do people have difficulty understanding where to go for
5 mental health care?

6 A Because it's not coordinated in a well-organized central
7 way. There are places to find out who are the providers in the
8 area. You would call a managed care organization, an MCO.
9 Someone there should maintain a list of all accredited
10 providers for that area, but many people don't under that rule.
11 So if they're calling about services, they think they are
12 actually calling a provider, when they're actually calling, you
13 know, a contract overseer, a manager. And then they get
14 referred to another place which is actually a provider.

15 It's just difficult when things aren't centralized. And if
16 you're just the average person on the street and you haven't
17 been following everything going on with mental health,
18 sometimes that's confusing.

19 Q And it can be especially confusing for people with SMI?

20 A Yes, it would be even more difficult for someone with SMI.

21 Q What is emergency room boarding?

22 A Emergency room boarding refers to someone being in an
23 emergency room and having been identified as needing a hospital
24 admission but having to stay in the emergency room until a bed
25 is available.

1 Q In your experience, have emergency rooms in North Carolina
2 experienced emergency room boarding issues?

3 A Yes, they have.

4 Q Do you have any personal knowledge of that occurring?

5 A Yes.

6 Q What personal knowledge, just generally speaking, do you
7 have of that?

8 A I know that many of the people waiting to get into the
9 hospital where I work right now are in that situation. What we
10 do is, we prioritize the people who are most dangerous and try
11 to move them as quickly out of emergency rooms. I also, when I
12 was working as an ACT team member, you know, was in emergency
13 rooms, you know, periodically with individuals, so I was aware
14 of that.

15 Q Do you have similar -- strike that. To your knowledge, do
16 you have similar issues with -- in North Carolina with people
17 with SMI being in jails?

18 A Yeah, I would say that they're not in jails just waiting to
19 go to treatment. So there are people who get -- are picked up
20 and in jails because they've been charged with something and
21 happen also to have mental health problems, yes.

22 Q You personally don't believe that mental health has ever
23 been funded sufficiently. Is that correct?

24 A I personally believe mental health has always needed more
25 funding, as long as -- yes, as long as I've been doing the job,

1 yeah.

2 Q Is funding a universal issue in mental health?

3 A It's -- I don't know if it's universal, but it seems, from
4 what I've read and have experienced, that it's pretty common to
5 have --

6 Q Test your memory. Did you say it was universal in your
7 deposition?

8 A I might have.

9 Q Okay. Do you believe that mental health has historically
10 been underfunded by the federal government?

11 A Yes. I mean, I think we have had to struggle to get
12 funding for research, and -- yes. So I would say yes.

13 Q Is housing one of the areas in which the federal government
14 has historically underfunded mental health?

15 A That's a complicated -- I'm not -- there's multiple ways
16 that housing gets funded, so I'm not sure. But I'm going say
17 yes to that.

18 Q Okay.

19 A So having enough affordable housing or enough supports to
20 afford housing, regardless of where that money comes from, has
21 been a struggle.

22 Q Doctor, how do you assess whether community-based services
23 are uniformly available throughout a state?

24 A How do you assess that? I would hope that states monitor
25 and track that. They would know what providers are there and

1 what services are available and how far they reach in those
2 areas.

3 Q Do you know how to do that?

4 A I haven't had that as part of my experience, no.

5 Q Is PACT available in every area of North Carolina?

6 A I don't believe it is yet.

7 Q Doctor, I'm showing you what you previously saw today in
8 PDX-8. Do you recall looking at this document this morning?

9 A Yes.

10 Q I'd like to direct your attention to the far left column.

11 "Would have avoided or spent less time." Is that two different
12 categories?

13 A Yes.

14 Q "Would have avoided" means would not have gone to the
15 hospital at all?

16 A That's correct.

17 Q And "spent less time," a person would have gone to the
18 hospital but spent less time there?

19 A That's correct.

20 Q Would you turn to your report on page 8.

21 A Yes.

22 Q And this is person 27, and this is the first person in your
23 report. Is that correct?

24 A Yes.

25 Q Would you turn to page 10 of your report, please?

1 A That's not the first one. Page 10?

2 Q Yes.

3 A Okay.

4 Q All right. I want to direct your attention to finding
5 number 2. Does it say "Person 27 would have avoided or spent
6 less time in a state hospital if he had been provided
7 reasonable community-based services"?

8 A Yes, it does.

9 Q Okay. So for any of the individuals that you reviewed, did
10 you distinguish between "would have avoided," on the one hand,
11 and "spent less time" on the other hand?

12 A Did I distinguish, like, in my report --

13 Q Yes, ma'am.

14 A -- which one it would be? I don't recall separating those
15 out.

16 Q From reviewing -- strike that. Is there a way -- strike
17 that. If one reads your report, can one determine whether the
18 person would have avoided hospitalization altogether, or if
19 they would have went to a hospital but spent less time there,
20 for each of the 28 people you reviewed?

21 A I'm not sure that you could tell that for each of them. I
22 think probably there were -- for some of them, it could be
23 distinguished.

24 Q And that would be -- for those ones you could distinguish,
25 it would have stayed in the text of the report?

1 A Right. It would have been probably evident based on
2 whether or not they were, like, frequent admissions at a very
3 short duration or, you know, a very long one then -- yeah.

4 MR. SHELSON: I'm sorry, Your Honor. I keep looking
5 at what time it is because I want to finish in time.

6 (Short Pause)

7 BY MR. SHELSON:

8 Q All right. Doctor, this is Exhibit D-276.

9 A Yes.

10 Q It's the "Strategic Plan for Improvement of Behavioral
11 Health Services, North Carolina Department of Health and Human
12 Services," and it's dated January 31, 2018. Do you remember
13 discussing this during your deposition?

14 A Yes.

15 Q Let me direct your attention to page 3, please, which is
16 going to display. The context, "North Carolina's behavioral
17 health system faces many challenges from a chronic lack of
18 funding, to the stigma associated with mental illness, to a
19 work force that is hard to recruit and retain." Do you agree
20 with that statement?

21 MR. SCHUTZER: Objection, Your Honor. This is also
22 irrelevant and does not go to Dr. VanderZwaag's opinions about
23 the clinical needs of individuals in Mississippi and how to
24 meet those needs. It's policy documents that Dr. VanderZwaag
25 did not offer an opinion on about North Carolina or

1 Mississippi.

2 THE COURT: Let me hear your response, Mr. Shelson.

3 MR. SHELSON: Well, Your Honor, two things: First,
4 Dr. VanderZwaag has testified to a good bit more than literally
5 only the clinical needs of individuals in Mississippi.

6 The second thing we would say, Your Honor, is I'm not
7 asking her about any policy of North Carolina. I'm simply
8 asking whether the statements I would like to read to her are
9 consistent with her extensive experience in the state of North
10 Carolina.

11 THE COURT: Okay. Objection overruled.

12 A The question was, do I agree with that statement?

13 BY MR. SHELSON:

14 Q Yes, ma'am.

15 A The bold there? I generally agree. I don't think that --
16 I think there's been a lot of change and improvement with
17 stigma, but otherwise...

18 Q This is page 4. "About one in five American adults have a
19 mental health condition. Yet 56 percent of adults with mental
20 illness do not receive treatment." Is that consistent with
21 your experience as a psychiatrist?

22 A I don't know the number -- the percentage. It's not
23 something I've followed. I'm a clinician, and I deal with
24 individuals. So most of my work is really brought down to the
25 individual level.

1 Q The next sentence reads, "Barriers to care include a
2 chronically underfunded mental health care system, the social
3 stigma of behavioral health conditions, high costs of care, a
4 lack of mental health professionals, and insufficient
5 community-based resources to meet the needs of those
6 populations." In your career as a clinician, have you
7 encountered those kind of barriers?

8 A Yes. I've also -- I've also encountered a lot of the
9 things there that are going well too, so I have mixed -- it's
10 mixed, from my experience.

11 Q Okay. If I could direct your attention to in North
12 Carolina. "In North Carolina, there have been cuts in mental
13 health spending each year since the Great Recession. These
14 cuts have exacerbated the many barriers to mental health care
15 in North Carolina." Do you agree with that statement?

16 MR. SCHUTZER: I object again, Your Honor. We're now
17 just reading the document into the record. It speaks for
18 itself and is of limited relevance.

19 THE COURT: All right. Objection overruled.

20 MR. SCHUTZER: If I could have a standing objection,
21 Your Honor.

22 THE COURT: All right.

23 MR. SCHUTZER: Thank you.

24 A I'm sorry. I don't remember what it said.

25 BY MR. SHELSON:

1 Q I apologize.

2 A That's all right.

3 Q Can you just read it to yourself? No reason for me to read
4 it to you again. These two sentences starting right there.

5 A Again, I'm like layers removed from all of that level of
6 knowledge about the actual funding or cuts. Anything I would
7 learn would be through reading a newspaper or general knowledge
8 of that sort of thing. I did not see an impact of those cuts
9 on the care that I was providing at the time.

10 Q In your experience, are there mental health work force
11 shortages in North Carolina?

12 A Yes.

13 Q To your knowledge, what mental health work force shortages
14 are there in North Carolina?

15 A Like most parts of the country, we have some shortages with
16 psychiatry. There are shortages of mental health nurses. And
17 I do think that we still have some shortages of peer support.

18 Q Are the mental health work force shortages more pronounced
19 in the rural areas of North Carolina?

20 A I can say that I am more familiar with that with related to
21 the psychiatric provider positions. So yes, I know of that to
22 be true with that group, but I'm not sure about others.

23 Q So in your experience in rural areas of North Carolina,
24 there are psychiatric work force shortages?

25 A Psychiatrists, yes.

1 Q Psychiatrists. Thank you. And to your knowledge, is that
2 because it is difficult to recruit psychiatrists to rural areas
3 of North Carolina?

4 A I can only assume that that's true. I know that there are
5 certain -- not all rural areas in the state, but certain areas
6 of the state that have had difficulty getting psychiatrists to
7 work there.

8 Q Such as western North Carolina, west of, say, Asheville?

9 A Again, I think the shortages I'm more aware of are in the
10 northeastern part of the state, but it's possibly some
11 shortages in the western part of the state as well.

12 MR. SHELSON: Your Honor, I did not do this, but we
13 would move to admit Exhibit D-76.

14 THE COURT: Exhibit D-276?

15 MR. SHELSON: Yes, sir, D-276.

16 THE COURT: Any objection from the United States?

17 MR. SCHUTZER: The same objection, Your Honor,
18 relevance.

19 THE COURT: D-276 will be received into evidence.

20 (Exhibit D-276 marked)

21 MR. SHELSON: May I approach the witness, Your Honor?

22 THE COURT: Yes, you may.

23 BY MR. SHELSON:

24 Q I'm going to try my best to finish by 1:30.

25 THE COURT: All right.

1 BY MR. SHELSON:

2 Q Okay. Doctor, Exhibit D-265, this is a findings letter to
3 the State of North Carolina dated July 28th, 2011. Do you
4 recall discussing this document in your deposition?

5 A Yes.

6 Q Were you aware that this letter had been issued?

7 A I believe I was aware that it had been issued, yes.

8 Q Were you aware that the United States alleged North
9 Carolina's adult care homes violated the Americans with
10 Disabilities Act?

11 A Yes.

12 MR. SHELSON: Your Honor, we would move to admit
13 Exhibit D-265 into evidence.

14 THE COURT: Any objection from the United States?

15 MR. SCHUTZER: Yes, Your Honor. The relevance of this
16 document, it is not relevant. Mississippi -- I'm sorry. North
17 Carolina's compliance or noncompliance with the ADA is not
18 relevant to Mississippi's noncompliance with the ADA.

19 THE COURT: Let me hear from you, Mr. Shelson.

20 MR. SHELSON: Your Honor, it's going to go to two
21 things that we haven't had the opportunity to explore yet at
22 this stage of the proceedings, but one is the standard that the
23 United States is attempting to hold Mississippi to for the
24 sufficiency of its statewide system of mental health care.
25 That's one. And the second thing it goes to is -- Your Honor,

1 I'm 56 years old, and I forgot the second thing, so I'm down to
2 one. I just have one thing.

3 THE COURT: The court is going to overrule the
4 objection. I heard the prefatory statement that this witness
5 was presented with this during her deposition. Is that
6 correct?

7 MR. SHELSON: Yes, Your Honor.

8 THE COURT: All right. The court is going to overrule
9 the objection.

10 MR. SHELSON: Your Honor, may I approach.

11 THE COURT: Yes, you may.

12 MR. SHELSON: It's the last one, Your Honor.

13 BY MR. SHELSON:

14 Q Doctor, this is Exhibit D-269. Do you recall discussing
15 this document during your deposition?

16 A I believe I did -- I believe we did, yes.

17 Q And is this document the modification of the settlement
18 agreement between the United States and the State of North
19 Carolina?

20 A Yes.

21 Q And I just have two questions about this, and they are both
22 on page 2. The first one here, Doctor, does it say, "By
23 July 1st, 2021, the State will provide housing to at least
24 3,000 individuals"?

25 A Yes.

1 Q Were you aware of the existence of that item?

2 A Yes.

3 Q All right. And then the highlight below that reads, "The
4 State will provide supported employment services to a total of
5 2500 individuals." Were you aware of that requirement?

6 A Not the exact numbers, but I knew there was a number
7 identified to receive the service, yes.

8 MR. SHELSON: Your Honor, we move to admit
9 Exhibit D-269 into evidence.

10 THE COURT: Any objection from the United States?

11 MR. SCHUTZER: Yes, Your Honor. Same objection, in
12 particular --

13 THE COURT: Make sure you're speaking into the mic.

14 MR. SCHUTZER: Yes, Your Honor. For all of the
15 reasons I've previously stated as well, this relates to a
16 settlement agreement between the United States and North
17 Carolina. And so the issue that this document speaks to is
18 compliance with the settlement agreement, not compliance with
19 the ADA.

20 THE COURT: Okay. The court is going to overrule the
21 objection. I think it's -- I think it's relevant, particularly
22 if we talk about remedies later on. So that's D-269 --

23 MR. SHELSON: D-269.

24 THE COURT: -- will be received into evidence.

25 (Exhibit D-269 marked)

1 BY MR. SHELSON:

2 Q All right. Doctor, I'm almost finished. So as we
3 established, you reviewed 28 individuals in Mississippi.
4 Correct?

5 A Yes.

6 Q And well, at least for the 27 who are living, you made --
7 you gave your opinions on what each of -- the services that
8 each one of them needed to stay in the community. Is that
9 right?

10 A Yes.

11 Q And did you determine what it would cost to deliver the
12 services you recommended for those individuals?

13 A I wasn't asked to look at costs.

14 Q In your deposition, I asked you the following question:
15 "How do you determine whether a state is offering sufficient
16 community-based services?" Do you recall your answer?

17 A Not offhand.

18 Q Well, let me just ask you the question then. How do you
19 determine whether a state is offering sufficient
20 community-based services?

21 A I think you would have to look at a variety of measures
22 that we would consider positive outcomes in response to
23 appropriate services. So again, reduction in the use of
24 hospital bed days, people in stable housing, number of people
25 employed. Those kinds of measurements would give an indication

1 of whether or not the system is supporting people in the ways
2 that are most helpful to them.

3 Q Okay. I want to show this to you. This is page 93 of your
4 deposition. I'll direct your attention to line 8.

5 "Question: How do you determine whether a state is
6 offering sufficient community-based services?" What was your
7 answer?

8 A At that point, I was struggling to answer that question,
9 and I said, I don't know the answer to that. I said that
10 sometimes that you can't just use the need for hospital care as
11 a measurement because sometimes people need hospital care even
12 if everything's going right.

13 And then I said you can use any number of indicators. So I
14 don't know what I said after that.

15 Q Which, in fairness to you, I represent there's some of the
16 ones you just mentioned. But -- so the point I want to make
17 here is, the sentence that -- from lines 14 to 16, where you
18 said, "So it can't be evidenced by having no psychiatric
19 hospitals," what were you referring to there?

20 A Well, I think what I was referring to was that we need a --
21 an array of care, we need a continuum of care to meet people's
22 needs at the time. So hospitals are part of that continuum of
23 care, just as in any health -- other health-related fields. So
24 sometimes people need a hospital.

25 MR. SHELSON: Your Honor, may I have a moment to

1 confer.

2 THE COURT: Yes, you may.

3 MR. SHELSON: Thank you, Your Honor.

4 (Short Pause)

5 MR. SHELSON: Your Honor, thank you. We have no
6 further questions. And thank you, Doctor, for your time.

7 THE COURT: All right.

8 MS. RUSH: Your Honor, our realtime seems to have
9 broken down. I'm having difficulty following the proceedings.

10 THE COURT: Okay.

11 (Off Record)

12 THE COURT: You may proceed, Mr. Schutzer.

13 MR. SCHUTZER: Thank you, Your Honor. Just a few
14 brief questions for you, Dr. VanderZwaag, and then we'll get
15 you out of here.

16 REDIRECT EXAMINATION

17 BY MR. SCHUTZER:

18 Q You were asked some questions comparing the symptoms people
19 experience when they went into the hospital to the symptoms
20 they were experiencing at the time you met them. Do you recall
21 those questions?

22 A Yes.

23 Q If somebody is not experiencing symptoms, does that mean
24 they are not at risk of going back to a state hospital?

25 A No.

1 Q Why is that?

2 A Because that -- what that indicates is that they are
3 individuals who -- there are some effective treatments that get
4 them back to a level of low symptoms, but that person in
5 particular that we were discussing had had episodes of
6 increased symptoms multiple times in his history.

7 So again, without ongoing proper treatment and supports,
8 he's at risk because another episode could certainly come on.
9 So sometimes being without medicine or sometimes having a
10 significant stressor happen, all of those things can make those
11 symptoms return, which could put them at risk.

12 Q Are there effective community-based services for people who
13 have significant behavioral issues?

14 A Significant behavioral issues?

15 Q I'm sorry. People with SMI, serious mental illness, who
16 also may have aggression or violent behaviors. Are there
17 effective community-based services for those individuals?

18 A That's a hard question to answer because I -- in my mind,
19 I'm trying to understand what level of behavior you're
20 discussing. So sometimes aggression or self-injurious behavior
21 rises to such a level that the community would not be a place
22 that it's possible to keep someone safe. However, if things
23 are more sort of low level or chronic, then that -- there
24 certainly are interventions that can be used to try to reduce
25 that kind of behavioral disturbance, yes.

1 Q You were asked a few questions about PACT services and
2 assertive engagement. How good are PACT services at engaging
3 individuals who are resistant to services?

4 A Well, hopefully, they are very good at it. It's one of the
5 things that we measure in doing fidelity reviews of ACT to
6 understand how good a team is, how close to the model. So a
7 way to measure assertive engagement is to look at the number of
8 dropouts from a team, and so the lower number of dropouts, the
9 better they are at assertive engagement and also retention. So
10 those things kind of go together in a way.

11 Q Last few questions. You were also asked a few questions
12 about North Carolina. How many PACT teams are there in North
13 Carolina?

14 A There are approximately 75.

15 Q How would you compare the community-based services received
16 by the 28 individuals you looked at with the community-based
17 services that are commonly available in North Carolina?

18 A There was much less variety, and there was an absence of
19 the kind of, again, assertive bringing treatment to the
20 individual that we have available in our state.

21 MR. SCHUTZER: No further questions. Thank you.

22 EXAMINATION BY THE COURT

23 THE COURT: Doctor, I have a couple of follow-up
24 questions based on your testimony earlier. And as always, the
25 United States -- the parties will have an opportunity to follow

1 up based on the questions that I've asked. So it may be a few
2 minutes, but not much longer, I don't think. But early on --
3 you've been testifying for a while.

4 THE WITNESS: Yes.

5 THE COURT: Early on in your testimony, there was some
6 discussion about person 46, I believe, and he had been admitted
7 to a hospital 18 different times over a period of seven years.
8 Do you recall that testimony?

9 THE WITNESS: Yes, I do.

10 THE COURT: Okay. And the United States asked you a
11 question. I think you talked about what would cause those
12 different -- possibly cause those different 18 admissions, and
13 also asked if you had treated someone who had been -- well,
14 maybe you answered the question in a way and said, I've never
15 treated anyone who had had 18 different admissions. I believe
16 that was your testimony.

17 My question, though, is in your work area, have you
18 seen or observed others who had -- who might have had -- I
19 think your testimony was you had never treated anyone who you
20 directed to go into an institution 18 different times, or
21 hospitals, I think.

22 THE WITNESS: Correct. So I think what -- I think I
23 did say that.

24 THE COURT: Go ahead.

25 THE WITNESS: What I meant by that was, while they

1 were receiving the kinds of services that I was doing, I didn't
2 see those kind -- that kind of frequency of hospitalization
3 while they were receiving that service.

4 I have worked with people who, prior to receiving
5 reasonable or, you know, appropriate services, had a history of
6 going in many, many times. So I definitely have worked with
7 people who, in their distant history, had over 100 hospital
8 admissions before.

9 THE COURT: In their distant history before --

10 THE WITNESS: Right, right.

11 THE COURT: Okay. And so you've seen it in North
12 Carolina?

13 THE WITNESS: Yes.

14 THE COURT: And other places, I guess? I don't know.

15 THE WITNESS: Right. I think that it was not uncommon
16 years ago. It's becoming less common.

17 THE COURT: When you say years ago, what decade are
18 you talking about?

19 THE WITNESS: Well, I'm talking in probably the '80s,
20 '90s. Starting in the '90s, there were definitely -- there's
21 been an increase in evidence-based practices, community
22 services, and things have started to decrease since. So you
23 see fewer of individuals like that.

24 THE COURT: Okay. Thank you.

25 The next question deals with I believe it's person 54.

1 And as a part of person 54 -- no, I'm sorry. Must be person
2 50, because the State of Mississippi directed your attention to
3 PX-1084, page 211 of PX-1084, which is in that binder toward
4 the end. It's the progress note.

5 THE WITNESS: Yes, uh-huh.

6 THE COURT: I think everybody agrees that this is a
7 progress note for person 50. And Mr. Shelson pointed out some
8 things in that progress note about the patient having had a
9 hearing with the judge at Building 45, and also a social work
10 note noted in May of 2016, that the psychotic symptoms in this
11 patient were active. And I think the questions, "grave
12 impairment, noncompliant," and stuff -- in other words, there
13 was some indication that this patient might have either had
14 delusions or either had acted on some and making threats
15 against her mother, I believe.

16 THE WITNESS: Yes, I think prior to admission, yes.

17 THE COURT: Prior to admission?

18 THE WITNESS: Yes.

19 THE COURT: Okay. I guess my question is, if someone
20 is acting in that way and had been under a doctor's care prior
21 to that, would the hospital be the best place for this person
22 if -- I mean, would you consider those to be acts that are
23 dangerous either to herself, or does she really -- or based on
24 these progress notes, does she pose a danger to others, like
25 her elderly mother?

1 THE WITNESS: Right. So I think it would involve some
2 assessment of is there some way to do it short of a
3 hospitalization, but sometimes people do need hospitalization.

4 So I agree, if someone is assaultive and there's no
5 way to find a lower level of care that could help them contain
6 that behavioral disturbance, then a hospital is a safe place to
7 go in order to get treatment until that goes away.

8 So -- but sometimes it's just a matter -- so if she
9 was directing her assaultiveness towards her mother and she was
10 delusional about her mother, an alternative sometimes is just
11 to help her move away from her mother rather than go to a
12 hospital herself. In other words, it doesn't really have to be
13 about going to the hospital. There's other strategies you can
14 use to kind of get a safe environment.

15 So -- and I think that -- but there was concerns
16 throughout her notes about her mother's safety, even though mom
17 seemed to want her at home. But there were concerns by other
18 people about that. But that's, you know, partly why -- she's
19 saying, I'd like to live on my own. That's partly why I also
20 recommend live on your own. You're not putting anyone else at
21 risk then, if you're putting Clorox on the walls. Like maybe
22 that's not a behavior we want to see, but it's not putting
23 anyone at risk. And a team could continue to work with her
24 while that's going on, and maybe she wouldn't necessarily just
25 have to stay in a hospital because of the potential to do those

1 things.

2 THE COURT: Okay. And I guess that calls for another
3 question. It might depend on what community she lives in, what
4 city or what county or what locality, as to whether or not
5 there may be another place to place her. Right?

6 I mean, I would imagine in some counties in
7 Mississippi -- let's not do counties. Let's do municipalities.
8 In some places, the options are much fewer, as far as putting
9 her -- if the alternative is to put her in a place of her own,
10 well, could you do that in some areas, in some localities in
11 Mississippi? That's just one of the questions that I'm going
12 to be asking the lawyers. Maybe that's not a question for you
13 at this time, but I'm just trying to find out if she is a
14 danger, the one place where many counties put people when
15 they -- when it looks like they are posing a danger is the
16 county jail. And would you consider that an appropriate place?

17 THE WITNESS: No, sir.

18 THE COURT: Okay.

19 THE WITNESS: I think what I was suggesting was that
20 in some places and with the right level of assessment, just
21 because someone has been exhibiting something that in a
22 particular environment or towards a particular person was
23 dangerous, that doesn't mean the only solution is to get locked
24 up either in a hospital or a jail, no. I understand some of
25 these limitations of where people are and things, but it could

1 just be going -- say she's angry at this person but not
2 everybody else. Maybe she could go stay with a friend for a
3 few days.

4 So there's ways to diffuse crises sometimes that don't
5 necessarily even involve institutions at all. They involve
6 problem solving and creativity.

7 THE COURT: Okay. I believe, and I didn't make my
8 proper notes here -- I think you said in North Carolina, you
9 believe that -- I think Mr. Shelson asked you the question if
10 there was a waiting list for persons who are waiting to -- were
11 there enough beds in North Carolina, I believe was the
12 question. I'm hoping that was your question. Was it not,
13 Mr. Shelson, something like that?

14 MR. SHELSON: Your Honor, I was asking her about the
15 hospital she works at now, and I asked her whether there was a
16 waiting list for admissions to that hospital.

17 THE COURT: Okay. And you indicated that there was a
18 waiting list, I believe?

19 THE WITNESS: Yes, sir.

20 THE COURT: From where do you all receive your
21 patients? If there's a waiting list, where are those people --
22 where are they --

23 THE WITNESS: Where are they waiting?

24 THE COURT: Where are they waiting?

25 THE WITNESS: Many of them are already in a

1 psychiatric hospital. They are at another inpatient facility.
2 So that would be a group of individuals who they have treated
3 maybe up to, like, 30 days in an acute admission, but the
4 person still needs further hospitalization. So we get people
5 referred to us that way. Other ones are in emergency rooms,
6 and they have not yet been admitted to a community hospital
7 bed. But oftentimes, they'll get on our waiting list, but
8 they're also putting out -- trying to get beds elsewhere at the
9 same time.

10 So except -- so the ones that really wait to get into
11 our hospital are the ones who are -- they're having problems
12 managing the level of aggression or self-injury that they are
13 exhibiting in those other settings. So again, the way our
14 state hospitals work at this point, the vast majority of people
15 who make it in to us are people who are prioritized because
16 they have -- their extremely aggressive or assaultive or
17 dangerous to themselves in other -- either emergency room
18 settings or hospital settings.

19 THE COURT: Okay. Did I hear your testimony
20 correct -- am I right? I've been trying to make sure -- let me
21 ask -- let me ask the question. How many state hospitals does
22 North Carolina have?

23 THE WITNESS: Three.

24 THE COURT: That's what I thought you said. Only
25 three?

1 THE WITNESS: Yes, sir.

2 THE COURT: Okay. Do you know how many hospitals
3 there have inpatient treatment centers for -- to treat people
4 with mental illness?

5 THE WITNESS: Community hospitals or any kind of
6 hospital?

7 THE COURT: Any kind of hospital.

8 THE WITNESS: Many. I don't know the number.

9 THE COURT: Many?

10 THE WITNESS: Yes.

11 THE COURT: Okay. Well, what about community
12 hospitals then, if you know that number?

13 THE WITNESS: Well, I don't know that number.

14 THE COURT: Okay. You mentioned that there's --

15 THE WITNESS: I mean, they are all private, so we
16 don't have, like, other state-funded hospitals or local
17 community -- I mean, all of the hospitals -- when I say
18 community hospital, I mean ones that are in, you know, this
19 small community or that small community.

20 THE COURT: I suspect what we're going to hear later
21 on, I guess, we have our four state hospitals, whatever number
22 it is.

23 MR. SHELSON: It is four, Your Honor.

24 THE COURT: Four?

25 MR. SHELSON: Yes, sir.

1 THE COURT: Okay. And we might hear about the number
2 of hospital beds or hospital -- private hospitals that have
3 true inpatient services in the state of Mississippi, and I
4 don't think it's many. I may be wrong. I don't think it's
5 many. But you indicated there's 75 PACT teams in North
6 Carolina. Is that correct?

7 THE WITNESS: Yes.

8 THE COURT: Do you consider North Carolina a rural or
9 sort of an urban state or --

10 THE WITNESS: We're a mixed state. I would say we're
11 probably 50-50, a guess.

12 THE COURT: Okay. And we'll hear something about the
13 population of North Carolina. Or we'll take judicial notice of
14 what its population is. It is much higher than Mississippi.

15 THE WITNESS: Yes, sir.

16 THE COURT: All right. But I do want to ask you this
17 question, and this is my last question. When responding to
18 questions by Mr. Shelson, I think, he may have asked a
19 question, but I'm not exactly sure what question he asked, but
20 your response was that you do not hold North Carolina's mental
21 health system as a model for Mississippi, I think.

22 THE WITNESS: Yes, sir.

23 THE COURT: Is there a health care system in the
24 United States that would be a model for the State of
25 Mississippi to follow?

1 THE WITNESS: I cannot --

2 THE COURT: Based on your experience.

3 THE WITNESS: I cannot say. I don't know the answer
4 to that. So I think what all states are trying to do is,
5 we're -- I think all -- this is what I know about the field.
6 States are looking at what -- where is the field now, what do
7 we know about treatment, what do we know about best treatment,
8 how do we start to implement those practices, or in some
9 places, you know, how do we continue to modify that?

10 So it's going to always be an evolving field. So
11 holding out a model today might not be particularly helpful,
12 you know, three years from now. I've been in the field working
13 for a long time. There's been a lot of changes in the time
14 that I've been a psychiatrist. How I practice, what I believe
15 in, how I see things, how I see potential has changed
16 dramatically, and I think it will continue to change.

17 So what I think -- the only model I could say is
18 everyone -- there needs to be some flexibility for making
19 changes when there's evidence that things are no longer working
20 or are not working, and systems need to find some level of
21 nimbleness to address those changes so that they don't stay
22 behind, and that the people who receive services in those
23 states don't fall behind because they happen to live there. So
24 that's the best I can say about it.

25 I haven't studied it, but I've been in the field

1 awhile, and I've seen the changes in my state. And I do go to
2 national conferences, and I do keep up with the field. So it's
3 my best read on it.

4 THE COURT: But I guess your overall assessment would
5 be that there may not be a model, but Mississippi could be
6 doing better than what it's doing?

7 THE WITNESS: Right. There are services that we know
8 are evidence-based and work, and they help keep people out of
9 hospitals. So the extent that there's a model, it's like,
10 well, make sure those services are there.

11 So things we talked about today, like PACT or
12 permanent supported houses, supported employment, effective
13 crisis and diversion services, we know those things help people
14 stay out of hospitals, but how you put them together, how they
15 are financed, you know, each state's different around things
16 like that or rural versus urban. I mean, those things -- you
17 know, I don't know enough about Mississippi that I would say,
18 you know, this state matches Mississippi's best, follow that
19 one. I don't know enough about it.

20 THE COURT: But the evidence-based practice at this
21 time suggests that deinstitutionalization is good, I mean,
22 trying to keep people from getting into the cycle of being
23 reinstitutionalized?

24 THE WITNESS: Correct. Because we hope everyone can
25 live a life. And it's no life to be in a hospital. I mean,

1 it's being alive, but that's different than having a life.

2 So working with people effectively in the community is
3 about helping them establish and maintain, hold on to a
4 meaningful life. So that's where the evidence-based is.

5 THE COURT: Do you -- your current job is what?

6 THE WITNESS: Right now, I'm working back in a state
7 hospital. And --

8 THE COURT: Okay. That's what I thought. You are
9 working in a state hospital?

10 THE WITNESS: Uh-huh.

11 THE COURT: Since you're an expert witness, you could
12 have been here yesterday, but the testimony from one of the
13 witnesses described her hospital experience here in
14 Mississippi. One of the things she indicated was the lack of
15 privacy that one has in a hospital. I think her testimony was
16 that even though she had a bath -- or access to a bathroom in
17 her room, I think she still had to -- and if I'm wrong on this,
18 the parties will let me know -- she was still forced to use
19 communal -- an open bathroom where everybody was, and that --
20 she didn't use the word of taking away her dignity, but
21 obviously, that was discussed.

22 But I'm just trying to figure out the hospital
23 setting -- one of the other things she mentioned was having to
24 walk around with her personal tampons, or something of that
25 sort, and described that as well. But I guess my question is,

1 the hospital where you are in, are there -- is the hospital
2 instituting anything to make sure that the hospital setting
3 itself is less -- I don't want to call it -- I guess inspires
4 dignity with the residents who are in there? I guess that's my
5 question.

6 THE WITNESS: Yeah. Yeah.

7 THE COURT: What steps should hospitals do?

8 THE WITNESS: So I don't know -- I don't know how
9 possible it is to make a hospital setting, you know, whether
10 it's a medical hospital or a psychiatric hospital, feel like
11 you're anywhere close to home or somewhere comfortable.
12 They're just not. They're institutions, and the routine is
13 determined by other people, and the food is determined by other
14 people, and your privacy level is determined by other people.
15 So I'm not sure our hospital is any better or worse than that.

16 I do know that we do do -- we train every single staff
17 in our hospital on things like trauma-informed care. We're
18 very attuned to the fact that even just being in the hospital
19 can be traumatizing. Plus, people come with prior trauma. So
20 that's all about really treating people with dignity and
21 understanding that not responding to things that they might do
22 with anger or confrontation, but understanding, like, why --
23 you know, that they're doing the best they can at the time, and
24 things can sort of set them off.

25 So we're working hard to try and do that kind of

1 training and -- I will say, out in the field when I was doing
2 ACT services, it was very easy and very usual to run across all
3 sorts of outpatient people who talk and live recovery in
4 person-centered. In the hospital, I have to -- I'm working
5 hard to do a lot of training even, you know, in our system. So
6 everywhere -- it's a learning curve to go from a medical model
7 to a recovery model, but I think it's an important one, and
8 inpatient settings struggle a little bit more than the
9 outpatient settings with it.

10 THE COURT: Thank you, Dr. VanderZwaag. Those are all
11 the questions I have. I turn to the United States. Is there
12 follow-up based on what I've asked?

13 MR. SCHUTZER: Nothing further, Your Honor.

14 THE COURT: All right. To the State, Mr. Shelson?

15 MR. SHELSON: Yes, sir. I just wanted -- to Your
16 Honor's point about Melody Worsham's testimony, and I'm sure
17 the United States will correct me if I'm wrong. We understood
18 her testimony to be that she had never personally been in a
19 state hospital as a patient, but some of the things you listed
20 were her observations she made when she visited. I only wanted
21 to -- because Your Honor asked if there was a clarification.

22 THE COURT: Thank you. Thank you for that.

23 MR. SHELSON: Yes, sir.

24 RECROSS-EXAMINATION

25 BY MR. SHELSON:

1 Q And then just for Dr. VanderZwaag, Judge Reeves asked you,
2 in effect, you know, what do you do if someone wants to live in
3 a community where there may not be housing available. And you
4 may recall we talked about that in your deposition. As I
5 recall your testimony, you said, you know, that's a tough
6 problem, but what you do in that situation is work to get as
7 close as possible to the family and other natural supports. Is
8 that --

9 A Yes. Yes.

10 Q So even you can't get -- I don't know. For instance, if
11 somebody wants to live in community X, but they're just not
12 housing there, you try to get as close as you reasonably can?

13 A That's right.

14 MR. SHELSON: Thank you, Your Honor. Thank you.

15 THE COURT: All right. Dr. VanderZwaag, you may step
16 down. I assume this witness is finally excused?

17 MR. SCHUTZER: Yes, Your Honor.

18 THE COURT: All right. Thank you for your testimony.
19 Counsel, I certainly appreciate you all working with the court.
20 This concludes the testimony for this week, not just today.

21 We will start back up on Monday morning at 9 a.m.
22 Obviously, if there's anything that the court needs to take
23 care of before then, let the court know through contact with
24 the court either -- the best way to contact us would be through
25 e-mail, the chambers e-mail. We all have access to that. I

1 have access to it 24 hours a day. The law clerks don't like to
2 have access to it all that time. But if there's anything we
3 need to take care of before then, please let us know.

4 I hope you all are spending all the money you can here
5 in Jackson. I hope you're enjoying your stay. If you're
6 staying here over the weekend, I hope you take in some good
7 stuff. I recommend the Civil Rights Museum. That's a good
8 starting point.

9 I know it's all going to be on the record. That's
10 fine. That's a good starting point. If there's anything,
11 though, you all need that I can do, please let us know through
12 chambers e-mail. We'll see you all on Monday morning.

13 I will be open to any announcement that you are ready
14 to give me. Anything. Anything. I'm open to it, whether *It's*
15 *now resolved, and now that we can sort of work toward what*
16 *might be a model, it's been resolved or, Judge, I can guarantee*
17 *you it won't be six weeks.* That's always going to be on the
18 table. Thank y'all so much. I'll see you Monday morning.
